Continued strong capital position – well above capital requirements

- **CET1 ratio of 17.4%** per 30 June 2026, versus **regulatory expectation of 16.4%**
- **SREP 2025:** P2R: 1.7% (min. ~1.0% CET1), P2G: 1.0%
- **Strong profitability:** on average **built >350 bps in CET1 capital** annually last three years pre shareholder distributions
- **2025 – reductions in CET1 ratio (~270 bps):**
 - Carnegie (~120 bps), share buy-backs (~86 bps) and risk weight floors on residential real estate (~60 bps)
- **2026 – CET1 ratio impacted by two share buy-back programmes, one completed and one announced**

²⁾ DNB expects a positive effect on the CET1 ratio of 20 bps upon completion of the divestment of DNB's shares in Luminor, see Appendix C

CET1 well above MDA trigger level

- MDA buffer must be seen in connection with DNB's capital generation

- DNB has on average **built >350 bps in CET1 capital** annually last three years pre shareholder distributions
- **2025 – reductions in CET1 ratio (~270 bps):**
 - Carnegie (~120 bps), share buy-backs (~86 bps) and risk weight floors on residential real estate (~60 bps)

2018	135 bps	40 bps

If DNB should breach the MDA trigger level, DNB will have to present an action plan to the NFSA, and cannot without the NFSA's consent distribute dividend, pay interest on AT1 etc

¹⁾ Pillar 2 Requirement included in the MDA trigger level with effect from Q2 2022. ²⁾ Assuming no changes compared to Q2 2026 figures ³⁾ Deducted from the capital per YE 25, dividend to be paid in 2026. Share buy-backs include buy-backs effectuated in 2025 and 2026.

AT1 and Tier 2 capital

- SREP 2025: P2R set at 1.7%, to be fulfilled with ~1.0% CET1 (minimum), ~0.3% AT1 and ~0.4% Tier 2
- **Thus, DNB's capital requirements can be met with AT1 capital of ~1.8% and Tier 2 capital of ~2.4%**

2) Statement given at the DNB Capital Markets Day 27 November 2014

EBA's 2025 EU-wide stress test – DNB performs very well

- DNB amongst the best performing banks across Nordic and international peers

- Under the 2025 EU stress test¹⁾ DNB's CET1 ratio increased by 26 bps²⁾ (reduced by 212 bps in the 2023 EU stress test), which compares to a European average reduction of 304 bps²⁾

- In the Adverse Scenario, DNB's CET1 ratio is always above the MDA threshold, including the current countercyclical buffer ("CCyB"). The CCyB is likely to be reduced or removed in an Adverse Scenario.
- DNB is projected to generate positive net profit each year in the adverse scenario stress test

MREL requirement

- DNB's **MREL requirement**¹⁾ is ~37% of adjusted REA²⁾ – leading to a need for minimum **EUR ~15.1bn** in MREL eligible debt as per end Q2 2026
 - DNB's need for MREL eligible debt is influenced by excess CET1 capital
- As per Q2 2026 figures, the total MREL requirement can be fulfilled with **EUR ~8.1 bn in Senior Non-Preferred** and **EUR ~7.0 bn in Senior Preferred**

MREL fulfilment per Q2 2026

Subordinated MREL fulfilment per Q2 2026

¹⁾ The MREL requirement will vary over time based on changes in REA and capital requirements. This can also influence the split between Senior Non-Preferred and Senior Preferred. In addition, changes in DNB's buffer to minimum CET1 requirement will impact the volume of MREL eligible debt needed.

Green bond framework

Summary

DNB's Green Finance Framework –

Issuance of green covered-, senior- and tier 2 bonds

Proceeds will be used to finance green residential buildings, renewable energy and clean transportation

Structured in line with the ICMA Green Bond Principles and partially aligned with the EU Taxonomy

Second Party Opinion (including EU Taxonomy assessment) from Sustainalytics

Impact reports from Multiconsult and Carbon Trust

Use of proceeds - overview

DNB Boligkreditt AS

Green Residential Buildings

New or existing
**residential buildings in
Norway:**

- i. **Built <2021:** within the **top 15% low carbon buildings**
- ii. **Built ≥2021: NZEB-10%**

DNB Bank ASA

Green Residential Buildings

New or existing
**residential buildings in
Norway:**

- i. **Built <2021:** within the **top 15% low carbon buildings**
- ii. **Built ≥2021: NZEB-10%**

Renewable Energy

- **Solar** power projects
- **Wind** power projects (onshore/offshore)
- **Hydro** power projects
- **Transmission and storage systems**

Clean Transportation

- **Zero Carbon Vehicles**
- Zero Carbon Transportation Infrastructure

- Identification of the most energy efficient (low carbon) buildings:
 - Residential buildings completed in the period from 2012 to 2020 (complying with TEK10 & TEK17 building codes)¹⁾
 - Residential buildings completed in 2021 or later complying with the NZEB -10% threshold²⁾
- Assessment by Sustainalytics concludes that the portfolio of green residential buildings is aligned with the relevant EU Taxonomy criteria

The Eligible Portfolio has an estimated average energy demand of less than 50% of the average Norwegian demand

¹⁾ Within the top 15% "best in class"-approach, demonstrated by way of proxies based on statistical analysis carried out by Multiconsult.

²⁾ In accordance with the EU Taxonomy Climate Delegated Act, buildings built from 1 January 2021 onwards should meet the 'NZEB -10%' criterion. Compliant buildings are assessed against the respective NZEB threshold published by the Norwegian Ministry, expressed as specific energy demand in kWh/m². At the time of writing all Norwegian buildings with EPC labels of A and some EPC B labels are compliant. The full methodology and selection approach used for NZEB-10% compliant buildings will be published in a technical report from a specialised external consultant.

Renewable Energy

~NOK 35 bn eligible green assets

- Solar power ~NOK 11 bn
 - Photovoltaic and concentrated solar power energy projects
- Wind power ~NOK 11 bn
 - Onshore and offshore wind energy projects

- Hydro power ~NOK 3 bn

One of the following requirements are met:

- the facility is a run of river plant and does not have an artificial reservoir
 - the power density of the electricity generation facility is above 5W/m²
 - the lifecycle emissions from the generation of the electricity from hydropower are lower than 100g CO₂e/kWh
- Electricity transmission, distribution, storage systems and mixed portfolio¹⁾ ~NOK 10 bn
 - Transmissions systems (or other infrastructure) to facilitate the integration of electricity from renewable energy sources into the grid
 - Construction and operation of facilities that store electricity and return it at a later time in the form of electricity (including pumped hydropower storage)

¹⁾ Includes Solar, Wind and Battery

- Zero carbon vehicles
 - Fully electric, hydrogen or otherwise zero direct (tailpipe) emissions vehicles for the transportation of passengers or freight
- Zero carbon transportation infrastructure
 - Infrastructure related to zero direct (tailpipe) emissions vehicles including, but not limited to, EV charging stations and hydrogen fueling stations
- Fulfil EU Taxonomy Substantial Contribution- and minimum social safeguards criteria
 - All vehicles must have zero direct (tailpipe) CO2 emissions
 - Infrastructures include EVs charging stations
 - The infrastructure is dedicated to the operation of vehicles with zero tailpipe CO2 emissions that do not transport or storage fossil fuels

- *"Sustainalytics is confident that DNB is well positioned to issue green bonds and loans and that the **DNB Bank ASA Green Finance Framework is robust, transparent and in alignment with the four core components of the Green Bond Principles 2021 and Green Loan Principles 2023**"*
- *"Sustainalytics believes that the Green Finance Framework is aligned with the overall sustainability ambitions of the Bank and that the **Green use of proceeds categories will contribute to the advancement of the UN Sustainable Development Goals 7, 9 and 11**"*
- *"Sustainalytics is of the opinion that the criteria defined in the Framework's three use of proceeds categories **are aligned with the applicable Technical Screening Criteria ("TSC") and 23 of the Do No Significant Harm ("DNSH") criteria**. 12 DNSH were assessed as partially aligned. Sustainalytics is also of the opinion that the activities and projects to be financed under **the Framework will be carried out in alignment with the EU Taxonomy's Minimum Safeguards.**"*

EU taxonomy assessment

Performed by  SUSTAINALYTICS

Alignment %		~61% aligned (NOK ~138bn / NOK ~224bn total portfolio)		
Eligible Green Asset Category	Green Residential Buildings	Renewable Energy (Wind, Solar & Hydropower)		Clean Transportation
Geography	Norway	EEA + UK 22% of Renewables	Rest of World 78% of Renewables	Norway, Sweden, Denmark
Substantial Contribution to Climate Change Mitigation	Aligned	Aligned		Aligned
Do No Significant Harm	Aligned	Partially Aligned ¹⁾		Partially Aligned ²⁾
Minimum Social Safeguards	Aligned	Aligned		Aligned

¹⁾ For assets outside the European Economic Area (EEA) + UK region, DNB is not able to provide specific documentation to substantiate full alignment with all the respective applicable DNSH criteria, which often relate to specific EU Directives. This is largely due to the misalignment with national regulations and the Equator Principles requirements with specific EU Directives & EU Taxonomy requirements. **DNB requires all project finance to be in compliance with the Equator Principles**, where an Environmental and Social Impact Assessment (ESIA) is an integral part. **In addition, ESG factors are built into DNB's risk assessment process.** Sustainalytics has therefore concluded 'partial alignment' on DNSH for Renewables outside the EEA and the UK.

²⁾ Electric Vehicles are assessed as not being able to meet the Pollution Prevention & Control DNSH criteria relating to tyres, given that currently almost all new electric car models are (factory) fitted with non-compliant tyres, or exact tyre information is not available.

Management of proceeds

- The proceeds of the green finance instruments issued will be managed in a **portfolio approach**
- DNB will strive, over time, to achieve a **level of allocation for the Eligible Green Loan Portfolio which matches or exceeds the balance of net proceeds from its outstanding green finance instruments**
- **Eligible Green Loans will be added to or removed** from DNB's Eligible Green Loan Portfolio to the extent required
- **Unallocated net proceeds** from Green Finance Instruments will be held in DNB's treasury liquidity portfolio, in cash or other short term liquid instruments, at DNB's own discretion

Covered bonds issued by DNB Bolikreditt AS qualify for Level 1-assets pursuant to LCR regulation (slide 1 of 2)

Covered bonds issued by DNB Boligkreditt AS fulfil the requirements to qualify as Level 1-assets pursuant to Commission Delegated Regulation (EU) 2015/61 regarding liquidity coverage requirement for credit institutions ("LCR Regulation").

With reference to Article 10(1)(f) of the LCR Regulation, DNB Boligkreditt AS confirms:

- Covered Bonds issued by DNB Boligkreditt AS are covered bonds as referred to in Article 3(1) of Covered Bond or are issued before 8 July 2022, and meet the requirements set out in Article 52(4) of Directive 2009/65/EC (cf. the European Commission's website:
http://ec.europa.eu/finance/investment/legal_texts/index_en.htm).
- The exposures to institutions in the cover pool meet the conditions laid down in Article 129(1)(c) and in Article 129(1a) of Regulation (EU) No 575/2013 (the "**CRR**").

Covered bonds issued by DNB Bolikreditt AS qualify for Level 1-assets pursuant to LCR regulation (slide 2 of 2)

With reference to Article 10(1)(f) of the LCR-regulation, DNB Boligkreditt AS confirms the following (cont.):

- Covered bonds issued by DNB Boligkreditt AS are assigned a credit assessment by a nominated ECAI which is at least credit quality step 1 in accordance with Article 129(4) of CRR, and the equivalent credit quality step in the event of short-term credit assessment 
- The cover pool does at all times meet an asset coverage requirement of at least 2% in excess of the amount required to meet the claims attaching to the covered bonds issued by DNB Boligkreditt AS 

ECB eligibility and CRR compliance of covered bonds issued by DNB Boligkreditt AS

- All covered bonds issued by DNB Boligkreditt AS are premium covered bonds and fulfil the eligibility criteria for marketable assets set by the Eurosystem and are thus eligible for Eurosystem monetary policy operations.
- DNB Boligkreditt AS confirms that the covered bonds it issues meet the requirements set out in CRR Articles 129(3), 129(3a) and 129(3b) and are collateralised by assets listed in Article 129(1) of the CRR – therefore, a 10% risk weight applies to the instrument

Luminor, ESG and Digitalisation

Divestment of DNB's shareholding in Luminor

- On 20 July 2026, DNB announced it would divest its 19.95% shareholding of Luminor Holding AS to OTP Bank Plc.
- Luminor is currently accounted for through the equity method in DNB's financial statements. DNB will classify its investment in Luminor as held for sale from 20 July 2026 and expects to recognise an accounting loss of approximately NOK 1 billion in the third quarter of 2026 in connection with the classification as held for sale.
- Upon completion of the transaction, DNB expects a positive effect on the CET1 ratio of ~20 bps.
- Completion of the transaction is subject to necessary regulatory approvals.
