Continued strong capital position

- **CET1 ratio of 17.3%** per 30 September 2026, versus **regulatory expectation of 16.3%**
- **SREP 2025**: P2R: 1.7% (min. ~1.0% CET1), P2G: 1.0%
- **Strong profitability:** on average **built >350 bps in CET1 capital** annually last three years pre shareholder distributions
- **2025 – reductions in CET1 ratio (~270 bps):**
  - Carnegie (~120 bps), share buy-backs (~86 bps) and risk weight floors on residential real estate (~60 bps)

- **2026 YTD – reductions in CET1 ratio (~110 bps): Three share buy-back programmes** (two completed, one announced)

1) *Assuming no changes compared to Q3 2026 figures.*

CET1 well above MDA trigger level

- MDA buffer must be seen in connection with DNB's capital generation

- DNB has on average **built >350 bps in CET1 capital** annually last three years pre shareholder distributions
- **2025 – reductions in CET1 ratio (~270 bps):**
  - Carnegie (~120 bps), share buy-backs (~86 bps) and risk weight floors on residential real estate (~60 bps)

If DNB should breach the MDA trigger level, DNB will have to present an action plan to the NFSA, and cannot without the NFSA's consent distribute dividend, pay interest on AT1 etc

[1)] Pillar 2 Requirement included in the MDA trigger level with effect from Q2 2022. [2)] Assuming no changes compared to Q3 2026 figures [3)] Deducted from the capital per YE 25, dividend to be paid in 2026. Share buy-backs include buy-backs effectuated in 2025 and 2026.

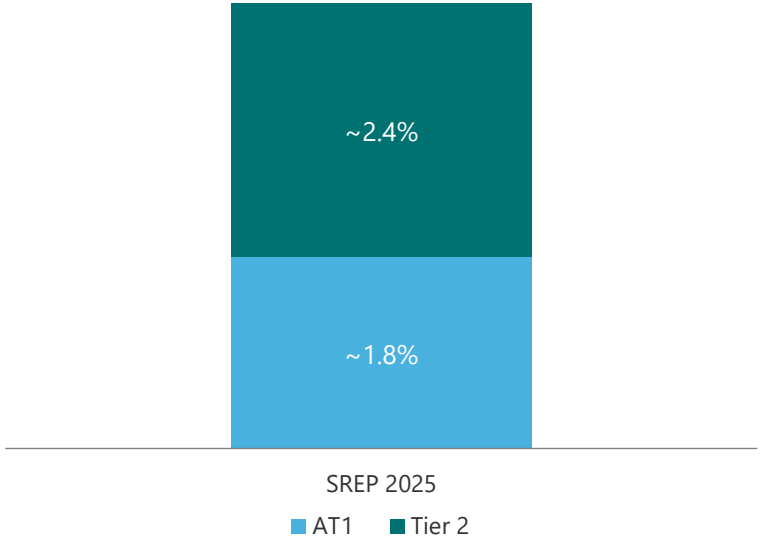

AT1 and Tier 2 capital

- SREP 2025: P2R set at 1.7%, to be fulfilled with ~1.0% CET1 (minimum), ~0.3% AT1 and ~0.4% Tier 2
- **Thus, DNB's capital requirements can be met with AT1 capital of ~1.8% and Tier 2 capital of ~2.4%**

2) *Statement given at the DNB Capital Markets Day 27 November 2014*

EBA's 2025 EU-wide stress test – DNB performs very well

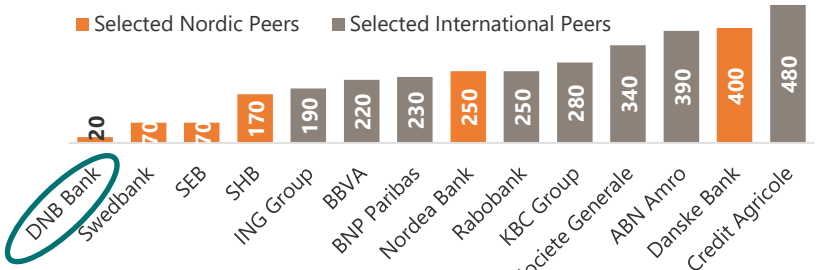

- DNB amongst the best performing banks across Nordic and international peers

- Under the 2025 EU stress test[1] DNB's CET1 ratio increased by 26 bps[2] (reduced by 212 bps in the 2023 EU stress test), which compares to a European average reduction of 304 bps[2]

CET1 ratio[3] – Fully loaded adverse scenario (% REA)

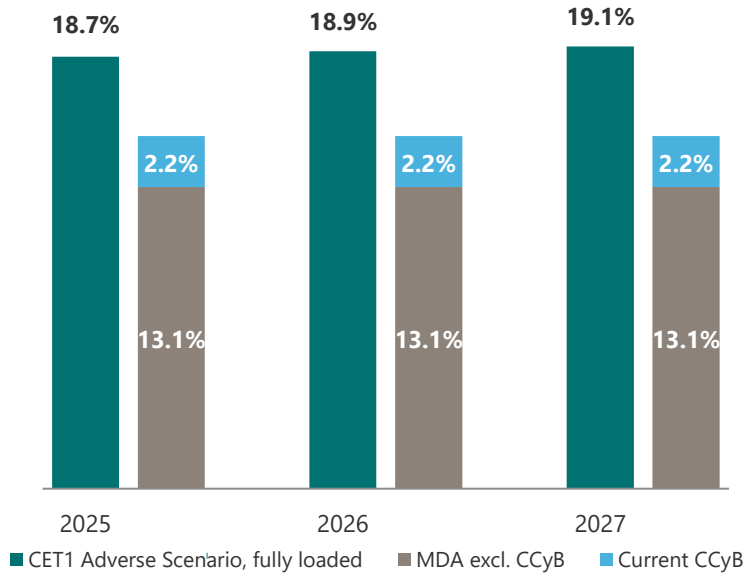

Maximum reduction in CET1 ratio[4] – Fully loaded adverse scenario (bps)

- In the Adverse Scenario, DNB's CET1 ratio is always above the MDA threshold, including the current countercyclical buffer ("CCyB"). The CCyB is likely to be reduced or removed in an Adverse Scenario.
- DNB is projected to generate positive net profit each year in the adverse scenario stress test

DNB performance in fully loaded adverse scenario vs CET1 thresholds

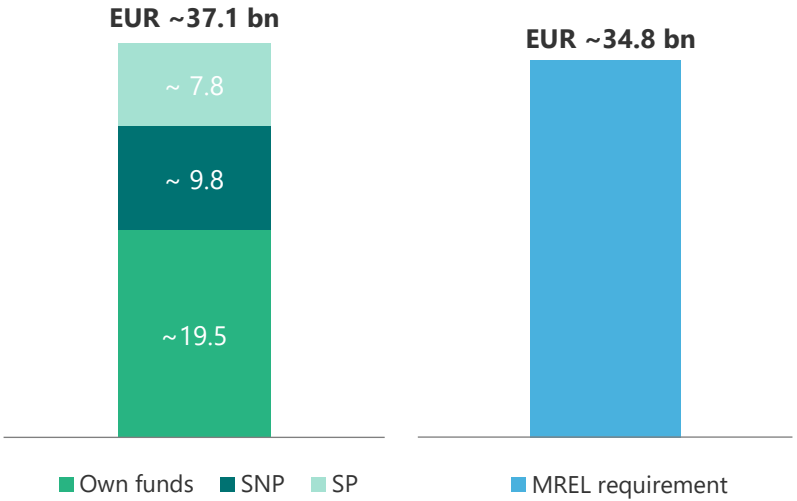

[1] EU-wide stress testing | European Banking Authority, [2] From restated CRR3 YE 2024 figures to YE 2027 in an adverse fully loaded scenario, [3] YE 2027 results, [4] From restated YE 2024 figures to lowest year in stress test

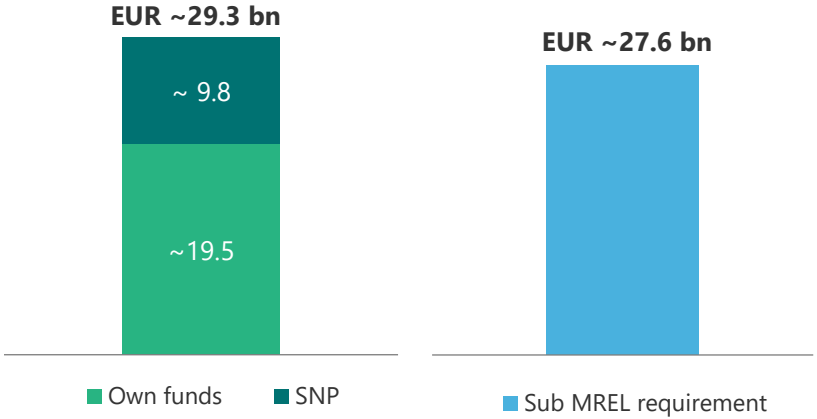

MREL requirement

- DNB's **MREL requirement**[1] is ~37% of adjusted REA[2] – leading to a need for minimum **EUR ~15.3bn** in MREL eligible debt as per end Q3 2026
  - DNB's need for MREL eligible debt is influenced by excess CET1 capital
- As per Q3 2026 figures, the total MREL requirement can be fulfilled with **EUR ~8.1 bn in Senior Non-Preferred** and **EUR ~7.2 bn in Senior Preferred**

MREL fulfilment per Q3 2026

Subordinated MREL fulfilment per Q3 2026

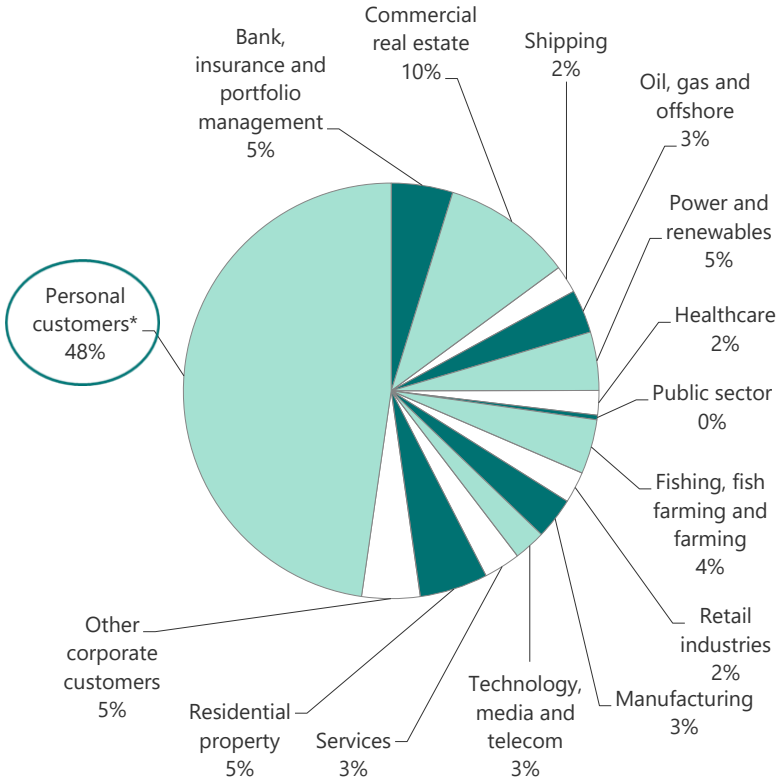

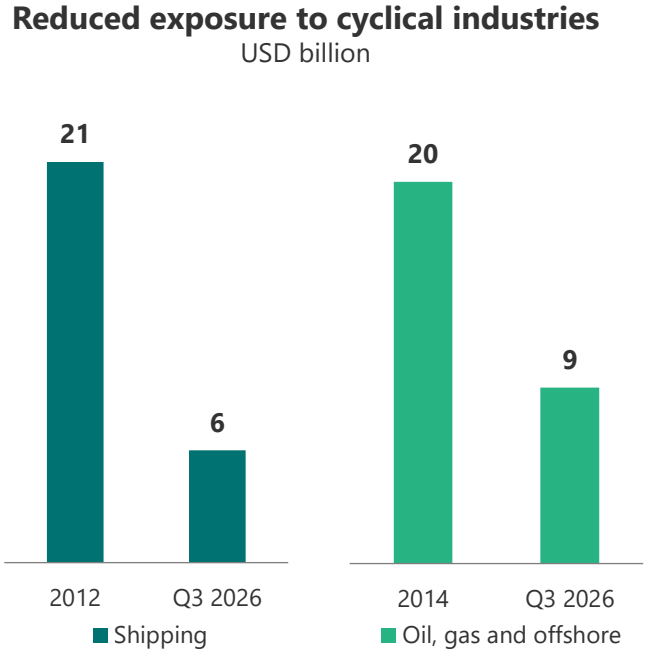

[1] The MREL requirement will vary over time based on changes in REA and capital requirements. This can also influence the split between Senior Non-Preferred and Senior Preferred. In addition, changes in DNB's buffer to minimum CET1 requirement will impact the volume of MREL eligible debt needed.

Green Residential Buildings

~NOK 231 bn eligible green assets

- Identification of the most energy efficient (low carbon) buildings[1)]:
  - Residential buildings built prior to 2021 and complying with EPC A or top 15% thresholds
  - Residential buildings built from 2021 or later complying with the NZEB -10% threshold
- Residential buildings exposed to high physical climate risk are excluded ('Do No Significant Harm' criteria)
- Assessment by Moody's concludes that the portfolio of green residential buildings is aligned with the relevant EU Taxonomy criteria

The Eligible Portfolio has an estimated average energy demand of less than 50% of the average Norwegian demand

1) DNB implements the following recommendations, guidance and methodologies to select eligible assets under these criteria:

i. The Norwegian authorities' defined thresholds for the 'top 15%' and 'NZEB' in kWh/m² (the recommended thresholds were developed by the Norwegian Water Resources and Energy Directorate (NVE) and published by the Norwegian Ministry of Finance and the Ministry of Energy). Further information is available here.

ii. Finans Norge's Taxonomy-compliant Property Assessment Guide

iii. Eiendomsverdi's Green Homes and the EU Taxonomy methodology

Renewable Energy

~NOK 35 bn eligible green assets

- Solar power ~NOK 11 bn
  - Photovoltaic and concentrated solar power energy projects
- Wind power ~NOK 11 bn
  - Onshore and offshore wind energy projects
- Hydro power ~NOK 3 bn

  One of the following requirements are met:
  - the facility is a run of river plant and does not have an artificial reservoir
  - the power density of the electricity generation facility is above 5W/m2
  - the lifecycle emissions from the generation of the electricity from hydropower are lower than 100g CO2e/kWh
- Electricity transmission, distribution, storage systems and mixed portfolio[1)] ~NOK 10 bn
  - Transmissions systems (or other infrastructure) to facilitate the integration of electricity from renewable energy sources into the grid
  - Construction and operation of facilities that store electricity and return it at a later time in the form of electricity (including pumped hydropower storage

1) Includes Solar, Wind and Battery

Clean Transportation

~NOK 59 bn eligible green assets

- Zero carbon vehicles
  - Fully electric, hydrogen or otherwise zero direct (tailpipe) emissions vehicles for the transportation of passengers or freight
- Zero carbon transportation infrastructure
  - Infrastructure related to zero direct (tailpipe) emissions vehicles including, but not limited to, EV charging stations and hydrogen fueling stations
- Fulfil EU Taxonomy Substantial Contribution- and minimum social safeguards criteria
  - All vehicles must have zero direct (tailpipe) CO2 emissions
  - Infrastructures include EVs charging stations
  - The infrastructure is dedicated to the operation of vehicles with zero tailpipe CO2 emissions that do not transport or storage fossil fuels

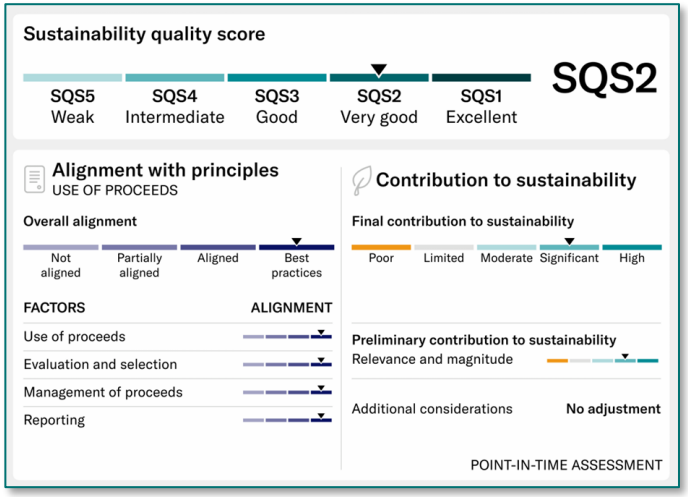

Second Party Opinion

MOODY'S

Green Finance Framework SPO

Independent Validation of DNB's Green Finance Framework: Moody's SPO

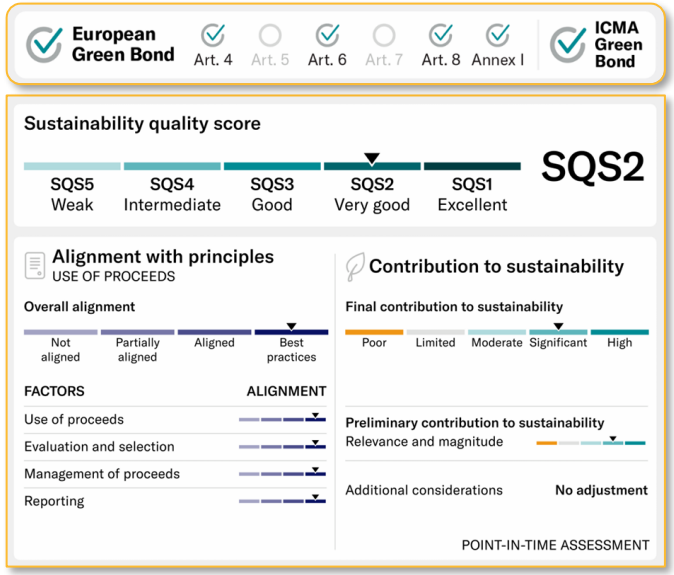

- Aligned with **the ICMA Green Bond Principles**
- Assigned an **SQS2 ("Very Good")** Sustainability Quality Score, reflecting strong alignment with sustainability objectives

EuGB Factsheet SPO

Independent Validation of DNB's EuGB Factsheet: Moody's SPO

- Aligned with **the EuGB Regulation & the ICMA Green Bond Principles**
- **Alignment with the EU Taxonomy criteria**
- Assigned an **SQS2 ("Very Good")** Sustainability Quality Score, reflecting strong alignment with sustainability objectives

EU Taxonomy Assessment

Performed by MOODY'S & SUSTAINALYTICS [1)]

Alignment %	~73% aligned *(NOK ~239bn / NOK ~326bn total portfolio)*

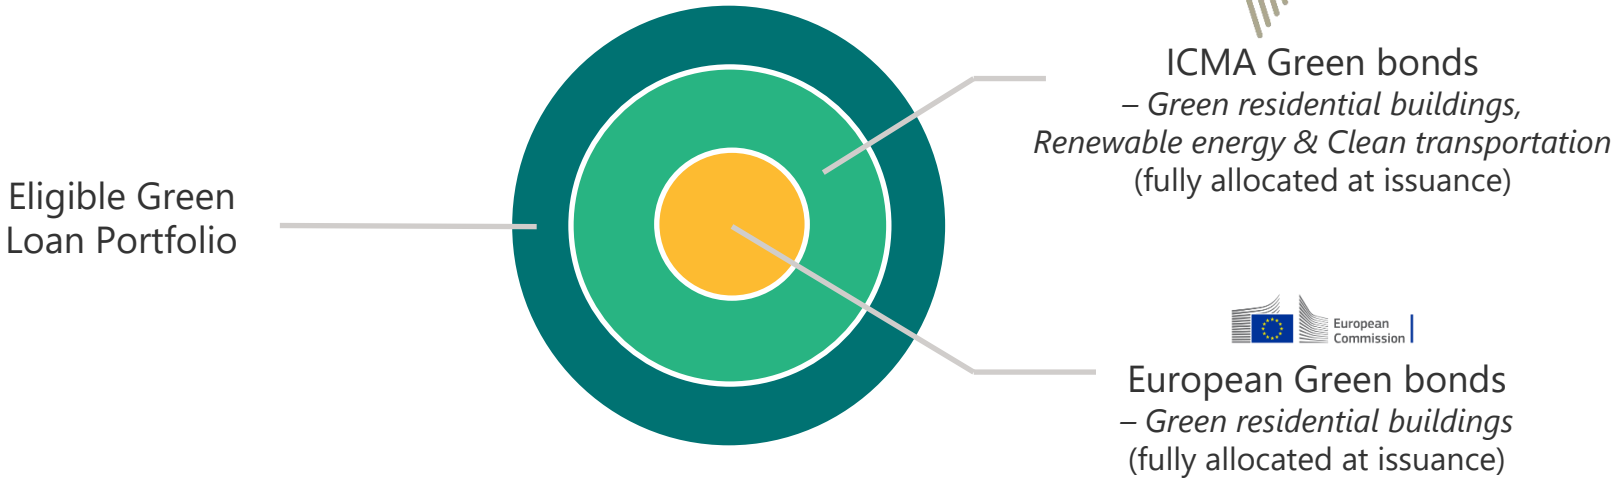

Eligible Green Asset Category	Green Residential Buildings	Renewable Energy (Wind, Solar & Hydropower)		Clean Transportation
Geography	Norway	EEA + UK 23% of Renewables	Rest of World 77% of Renewables	Norway, Sweden, Denmark
Substantial Contribution to Climate Change Mitigation	**Aligned**	**Aligned**		**Aligned**
Do No Significant Harm	**Aligned**	**Partially Aligned** [2)]		**Partially Aligned** [3)]
Minimum Social Safeguards	**Aligned**	**Aligned**		**Aligned**

1) *Alignment against the EU Climate Delegated Act 2021 provided by Moody's (October 2026 SPO) for Green Residential Buildings and Sustainalytics (October 2023 SPO) for Renewable Energy and Clean Transportation*

2) *For assets outside the European Economic Area (EEA) + UK region, DNB is not able to provide specific documentation to substantiate full alignment with all the respective applicable DNSH criteria, which often relate to specific EU Directives. This is largely due to the misalignment with national regulations and the Equator Principles requirements with specific EU Directives & EU Taxonomy requirements.* ***DNB requires all project finance to be in compliance with the Equator Principles,*** *where an Environmental and Social Impact Assessment (ESIA) is an integral part.* ***In addition, ESG factors are built into DNB's risk assessment process.*** *Sustainalytics has therefore concluded 'partial alignment' on DNSH for Renewables outside the EEA and the UK.*

3) *Electric Vehicles are assessed as not being able to meet the Pollution Prevention & Control DNSH criteria relating to tyres, given that currently almost all new electric car models are (factory) fitted with non-compliant tyres, or exact tyre information is not available.*

Management of proceeds

- The proceeds of the green finance instruments issued will be managed in a **portfolio approach**
- DNB will strive, over time, to achieve a **level of allocation for the Eligible Green Loan Portfolio which matches or exceeds the balance of net proceeds from its outstanding green finance instruments**
- **Eligible Green Loans will be added to or removed** from DNB's Eligible Green Loan Portfolio to the extent required
- **Unallocated net proceeds** from Green Finance Instruments will be held in DNB's treasury liquidity portfolio, in cash or other short term liquid instruments, at DNB's own discretion

EuGB Programme – Structural considerations

Economic activity 7.7. 'Acquisition and ownership of buildings' [1),2)]

- For buildings completed before 31 December 2020: **EPC class A or rank among the top 15%** of the national building stock based on operational Primary Energy Demand (PED)
- For buildings completed after 31 December 2020: PED is **at least 10% below the nearly zero-energy building (NZEB) thresholds** set in the national regulation

Robust management of proceeds

- In accordance with the **portfolio approach**
- **Full allocation at issuance** expected
- DNB's EU Taxonomy aligned green loan portfolio is reviewed, monitored, and approved by the **Green Finance Committee** (GFC), composed of members from a group of departments with relevant stakes in DNB's Green Finance Instruments

EU Taxonomy 'Do No Significant Harm' compliance

- DNB utilises a model to identify loans that confirm **compliance with the required substantial contribution and do-no-significant-harm (DNSH) criteria** [3)]
- All buildings in DNB's loan portfolio receive a physical climate risk score from 0 (no risk) to 6 (highest risk), and **assets with a high-risk exposure (score 5-6) are defined as non-taxonomy aligned**, while other buildings (score 0-4) are included in the assessments

Transparent Reporting

- **Annual reporting on both allocation and impact at least until full allocation** [4)], at least at economic activity level and according to the EuGB Regulation post-issuance reporting templates
- Via its annual allocation report, **DNB will disclose the amount and percentage of new Green loans originated in the year of issuance** of the EuGB Programme
- The **allocation report will be externally validated by an ESMA registered external reviewer**.
- **Impact indicators are estimated externally by a consultant**

1. *DNB implements the following recommendations, guidance and methodologies to select eligible assets under these criteria:*
   i. *The Norwegian authorities' defined thresholds for the 'top 15%' and 'NZEB' in kWh/m² (the recommended thresholds were developed by the Norwegian Water Resources and Energy Directorate (NVE) and published by the Norwegian Ministry of Finance and the Ministry of Energy). Further information is available here.*
   ii. *Finans Norge's Taxonomy-compliant Property Assessment Guide*
   iii. *Eiendomsverdi's Green Homes and the EU Taxonomy methodology*
2. *Buildings exceeding 5000 m² are excluded*
3. *For residential mortgages no assessment of minimum safeguards under Art 18 of the Taxonomy Regulation is required*
4. *While the EuGB Regulation imposes to report at least until the date of full allocation of the proceeds of the EuGB Programme, DNB expects to keep reporting until their maturity.*

Total annual avoided emissions per NOKm (EURm) invested in Unsecured Green Bonds (ICMA)[3)]	**5.02 (59.36) tCO2e/year**

[1] As of 31 December 2025 for Renewable Energy & Clean Transportation and 30 September 2026 for green residential buildings due to a methodology update

[2] ICMA & EU Green covered bonds are allocated solely to green residential buildings situated within the boligkreditt entity, ICMA Green unsecured bonds (senior & Tier 2) are allocated to all Use of Proceeds categories (minus any green residential buildings already allocated to green covered bonds) and EU Green unsecured bonds (senior & Tier 2) are allocated to only the green residential buildings category (minus any green residential buildings already allocated to green covered bonds). DNB ensures on a best effort basis that ICMA & EU Green Covered Bonds will be allocated to assets within the covered bond cover pool (NOK 189,536m situated within the cover pool). For ICMA and EU Green Unsecured bonds, DNB may allocate towards Eligible Green Loans situated within DNB Boligkreditt, as per the guidance laid out in the ICMA Principles Guidance Handbook June 2026.

[3] Attributed impact for Unsecured ICMA Green bonds based on 21 October 2026 allocation share across use of proceeds categories for unsecured bonds – for more info see latest allocation & impact report

Covered bonds issued by DNB Bolikreditt AS qualify for Level 1-assets pursuant to LCR regulation (slide 1 of 2)

Covered bonds issued by DNB Boligkreditt AS fulfil the requirements to qualify as Level 1-assets pursuant to Commission Delegated Regulation (EU) 2015/61 regarding liquidity coverage requirement for credit institutions ("LCR Regulation").

With reference to Article 10(1)(f) of the LCR Regulation, DNB Boligkreditt AS confirms:

- Covered Bonds issued by DNB Boligkreditt AS are covered bonds as referred to in Article 3(1) of Covered Bond or are issued before 8 July 2022, and meet the requirements set out in Article 52(4) of Directive 2009/65/EC (cf. the European Commission's website: http://ec.europa.eu/finance/investment/legal_texts/index_en.htm).

- The exposures to institutions in the cover pool meet the conditions laid down in Article 129(1)(c) and in Article 129(1a) of Regulation (EU) No 575/2013 (the "**CRR**").

Covered bonds issued by DNB Bolikreditt AS qualify for Level 1-assets pursuant to LCR regulation (slide 2 of 2)

With reference to Article 10(1)(f) of the LCR-regulation, DNB Boligkreditt AS confirms the following (cont.):

- Covered bonds issued by DNB Boligkreditt AS are assigned a credit assessment by a nominated ECAI which is at least credit quality step 1 in accordance with Article 129(4) of CRR, and the equivalent credit quality step in the event of short-term credit assessment

- The cover pool does at all times meet an asset coverage requirement of at least 2% in excess of the amount required to meet the claims attaching to the covered bonds issued by DNB Boligkreditt AS

ECB eligibility and CRR compliance of covered bonds issued by DNB Boligkreditt AS

- All covered bonds issued by DNB Boligkreditt AS are premium covered bonds and fulfil the eligibility criteria for marketable assets set by the Eurosystem and are thus eligible for Eurosystem monetary policy operations.

- DNB Boligkreditt AS confirms that the covered bonds it issues meet the requirements set out in CRR Articles 129(3), 129(3a) and 129(3b) and are collateralised by assets listed in Article 129(1) of the CRR – therefore, a 10% risk weight applies to the instrument
