Directors' report

First quarter financial performance

DNB recorded profits of NOK 6 533 million in the first quarter of 2015, up NOK 1 054 million from the first quarter of 2014. Higher lending volumes and wider deposit spreads helped raise net interest income, while other operating income declined in reflection of a high level of non-recurring income in the first quarter of 2014. Adjusted for basis swaps, there was a NOK 702 million reduction in profits.

There was an average increase in the healthy loan portfolio of 8.6 per cent parallel to a 7.0 per cent increase in average deposit volumes from the first quarter of 2014. The strong volume growth was partly due to exchange rate movements. Lending spreads narrowed by 0.10 percentage points, while deposit spreads widened by 0.18 percentage points.

Adjusted for the effect of basis swaps, net other operating income was down NOK 1 160 million compared with the first quarter of 2014. The reduction mainly reflected the positive accounting effects of the NOK 913 million rise in value of DNB's shareholding in Nets in the first quarter of 2014. Net commissions and fees were NOK 27 million higher than in the first quarter of 2014, mainly due to a higher level of activity in DNB Eiendom.

Total operating expenses increased by NOK 246 million from the first quarter of 2014. Ordinary operating expenses, excluding restructuring costs and other non-recurring effects, rose by NOK 47 million during the corresponding period. The key factors behind the increase were exchange rate movements and higher pension expenses.

Impairment losses on loans and guarantees totalled NOK 575 million for the quarter, up NOK 494 million from the very low level in the first quarter of 2014. There was an increase in collective impairment in the large corporate segment. In addition, impairment losses were recorded on loans to the mining industry. Individual impairment declined by 30 per cent compared with the fourth quarter of 2014. The total level of impairment in the Group was well within the normalised level in the first quarter of 2015.

The common equity Tier 1 capital ratio, calculated according to the transitional rules, increased from 11.9 per cent at end-March 2014 to 12.7 per cent.

Important events in the first quarter

During the first three months of the year, DNB's mobile bank was used more than 34 million times, overtaking DNB's Internet bank as Norway's largest banking service platform.

In order to meet the market competition, DNB implemented new interest rate reductions on 2 January. The adjustments entered into force for existing loans and deposits in early March.

In February, DNB launched the project "A valuable lesson" in cooperation with the Norwegian Red Cross. "A valuable lesson" is the name of a free digital educational programme which gives children a basic understanding of money, income and spending, what their rights are and good saving habits. The main purpose of the project is to ensure that personal finance becomes part of the curriculum in Norwegian schools to increase financial literacy among children and young people. The educational programme will be ready at the start of the school year in August, and a large number of primary schools in Norway have already said that they are interested to participate.

As the first commercial bank in the Nordic region, DNB issued a green bond of NOK 1 billion in February 2015 to promote increased financing of renewable energy projects. The bond has the same characteristics as an ordinary senior unsecured DNB bond, while the proceeds from the bond are earmarked for renewable energy financing.

During the first quarter, DNB Bank issued two additional Tier 1 capital instruments with a nominal value of NOK 2 150 million and USD 750 million, respectively. The instruments are perpetual, though the bank has a redemption option on specific dates.

In late February, DNB implemented the most extensive cleanup of its product portfolio ever, aiming to streamline prices and terms and conditions and ensure greater transparency. More than 140 account products were phased out. Around 20 mutual funds were merged with other funds, while 11 card and payment services were terminated.

After 33 years in the DNB Group, chief risk officer Trygve Young retired in February 2015. Terje Turnes took over his position as a member of the group management team.

In late January, DNB was included in the index of the global 100 most sustainable corporations in the world. The ranking was announced in February.

In March, the rating company Moody's changed DNB Bank ASA's rating from A1 negative outlook to A1 review for upgrade. The review is expected to be concluded during the first half of 2015.

In March, Finanstilsynet (the Financial Supervisory Authority of Norway) instructed DNB to increase the active management of the DNB Norge mutual fund. Measures have been initiated to fulfil this requirement.

Income statement, main items

Net interest income

	ist quarter ist quarter			
Amounts in NOK million	2015	Change	2014	
Net interest income	8 587	7 691		
Exchange rate movements		366		
Lending and deposit volumes	264			
Long-term funding costs	116			
Lending and deposit spreads	112			
Interest rate instruments	90			
Other net interest income		(54)		

Net interest income rose by NOK 895 million or 11.6 per cent from the first quarter of 2014, reflecting higher lending volumes, partly due to exchange rate movements, a positive impact from interest rate instruments and lower long-term funding costs. Average lending spreads contracted by 0.10 percentage points, while deposit spreads widened by 0.18 percentage points. Volume-weighted spreads increased by 0.03 percentage points. There was an average increase of NOK 114.3 billion or 8.6 per cent in the healthy loan portfolio compared with the first quarter of 2014. During the same period, deposits were up NOK 70.1 billion or 7.0 per cent.

Net other operating income

Profits from associated companies		(77)	
Net gains on other financial instruments		(182)	
Investment in Nets		(913)	

1) Guaranteed returns and allocations to policyholders deducted.

Net other operating income increased by NOK 1 247 million or 25.6 per cent from the first quarter of 2014. Adjusted for basis swaps and non-recurring effects relating to the investment in Nets in the first quarter of 2014, net other operating income was down NOK 248 million. There was a small increase in total commissions and fees, and income from real estate broking and credit broking had a positive effect on profits. Net gains on other financial instruments had the opposite effect, reducing profits by NOK 182 million. This was due to changes in the models for fair value measurement in the first quarter

of 2014, representing NOK 291 million. Income from underlying customer trading increased by NOK 163 million.

Operating expenses

	1st quarter	15	t quarter
Amounts in NOK million	2015	Change	2014
Operating expenses excluding			
non-recurring effects	5 215	47	5 168
Of which:			
Exchange rate effects for units outside Norwa	ay	83	
Currency-adjusted operating expenses		(36)	
Income-related costs			
Ordinary depreciation on operational leasing		17	
Expenses related to operations			
Other costs		37	
Fees		33	
Pension expenses		21	
Properties/premises		(61)	
Non-recurring effects	223	199	24
IT restructuring		108	
Other restructuring costs and non-recurring e	ffects	87	
Restructuring costs – employees		5	
Operating expenses	5 438	246	5 192

Operating expenses were up NOK 246 million from the first quarter of 2014. Non-recurring costs increased during the quarter, which was mainly a consequence of the extensive IT restructuring currently undertaken by DNB. Adjusted for non-recurring effects, there was an increase in expenses of NOK 47 million, which partly reflected an increase in fees and higher pension expenses due to a lower discount rate. Exchange rate effects linked to international operations contributed to a rise in other operating expenses compared with the first quarter of 2014.

Impairment of loans and guarantees

Impairment losses on loans and guarantees totalled NOK 575 million, up from NOK 80 million in the first quarter of 2014 and down from NOK 821 million in the fourth quarter of 2014. Compared with the first quarter of 2014, the most pronounced increase stemmed from the small and medium-sized enterprises segment. There was a rise in collective impairment in the large corporate segment, while there were reversals in the personal customer segment. Impairment losses in the energy portfolio were halved from the first quarter of 2014 to the corresponding period in 2015.

The decline in impairment from the fourth quarter of 2014 was mainly due to a reduction in individual impairment in the large corporates and international customers segment and the small and medium-sized enterprises segment. In the first quarter of 2015, collective impairment losses totalled NOK 44 million, up NOK 102 million from the fourth quarter of 2014, reflecting a sharp drop in oil prices and higher volumes in the healthy loan portfolio. Impairment losses in the first quarter of 2015 were slightly below the normalised long-term level.

Non-performing and doubtful loans and guarantees were reduced by NOK 2.6 billion from end-March 2014, totalling NOK 13.9 billion at end-March 2015. This represented 0.83 per cent of the loan portfolio, down from 1.19 per cent at end-March 2014.

Taxes

The DNB Group's tax expense for the first quarter of 2015 was NOK 2 130 million, or 24.5 per cent of pre-tax operating profits.

Financial performance, segments

Financial governance in DNB is adapted to the different customer segments. The customer segments have been redefined in 2015. As of 1 January 2015, DNB Finans' operations in Sweden and Denmark are included in the large corporates and international customers

segment. Previously, these operations were divided between the small and medium-sized enterprises segment and the personal customer segment. Figures for previous periods have been adjusted correspondingly.

- 1) Calculated relative to the 3-month money market rate.
- Calculated on the basis of allocated capital, which corresponds to the external capital adequacy requirement which must be met by the DNB Group.

The quarter was characterised by strong competition for home mortgage customers. Average net loans increased by 5.0 per cent from the first quarter of 2014, while there was a 0.8 per cent rise from the fourth quarter of 2014. Average deposits were up 6.1 per cent from the first quarter of 2014.

Net interest income rose by 3.6 per cent from the first quarter of 2014. Wider deposit spreads compensated for a contraction in lending spreads from the first quarter of 2014. The volume-weighted interest rate spread narrowed by 0.01 percentage points from the first quarter of 2014 and was unchanged from the fourth quarter of the year.

The main factor behind the increase in other operating income from the first quarter of 2014 was higher income from pension products and real estate broking. A high level of activity in DNB Eiendom and an increase in customer-paid marketing contributed to a moderate rise in costs during the period.

A large share of loans to personal customers represents well-secured home mortgages entailing low risk. In the first quarter of 2015, reversals on previous impairment losses exceeded new impairment losses. A total of NOK 45 million was recorded as income during the quarter, corresponding to net reversals of 0.03 per cent of average loans. In the first quarter of 2014, net impairment came to 0.05 per cent.

The market share of credit to households stood at 25.9 per cent at end-February 2015, while the market share of total household savings was 32.6 per cent. DNB Eiendom was the market leader in the first quarter and achieved a market share of 20.0 per cent at end-March

The digitalisation of banking services is accelerating, and the share of online user traffic is increasing. As a result of a higher self-service ratio, five branch offices were closed in the first quarter of 2015. Manual cash-handling services are no longer available at any of DNB's branch offices, with the exception of the branch office at Oslo Airport. DNB Eiendom has adapted to changes in customer behaviour and was the first real estate broker to introduce a trial project offering a chat service for housing sales and purchases.

DNB aspires to achieve continued profitable growth in the personal customer segment. Impairment losses on loans are expected to remain stable at a low level.

Small and medium-sized enterprises

	1st quarter		Change	
Income statement in NOK million	2015	2014	NOK mill	%
Net interest income	1 455	1 320	135	10.2
Net other operating income	461	376	85	22.7

Return on allocated capital 2)	11.9	12.4		
Cost/income ratio	39.5	44.3		
Ratio of deposits to loans	78.9	74.8		

- 1) Calculated relative to the 3-month money market rate.
- Calculated on the basis of allocated capital, which corresponds to the external capital adequacy requirement which must be met by the DNB Group.

There was a sound increase in loans to small and mediumsized enterprises in the first quarter of 2015. Average net loans to customers rose by 4.1 per cent from the first quarter of 2014. During the same period, deposits were up 9.7 per cent.

Rising volumes and wider deposit spreads ensured a healthy increase in net interest income compared with the first quarter of 2014. Net other operating income also showed strong growth. This was primarily due to a rise in income from fixed-income and foreign exchange products, reflecting a greater need among customers to hedge their positions. Furthermore, there was a strong rise in sales of other products. There was a slight increase in costs from the first quarter of 2014.

Net impairment losses on loans totalled NOK 290 million and related to loans to the mining industry. No material changes have been observed in the general credit quality in the segment. On an annual basis, impairment represented 0.56 per cent of net loans, up from 0.17 per cent in the year-earlier period. The quality of the loan portfolio is considered to be satisfactory. The close follow-up of customers and preventive measures are vital to retaining satisfactory quality.

Moderate credit growth is anticipated in the market, and DNB expects lending growth in this segment on a level with the banking market in general.

- 1) Calculated relative to the 3-month money market rate.
- Calculated on the basis of allocated capital, which corresponds to the external capital adequacy requirement which must be met by the DNB Group.

The weakened Norwegian krone strongly affected the growth in lending from the first quarter of 2014. Net loans to customers were up 13 per cent during this period. Adjusted for exchange rate movements, however, there was an underlying decrease in the portfolio of approximately 1 per cent, reflecting strategic portfolio adjustments to reduce the bank's exposure within industries such as shipping and real estate parallel to an increase in certain other sectors. Compared with the fourth quarter of 2014, lending volumes were up 6 per cent, which was also primarily due to exchange rate movements. Deposit volume was unchanged from the first quarter of 2014 and declined by 10 per cent after adjusting for exchange rate movements.

Due to a strong increase in loan volumes and wider deposit spreads, net interest income increased from the first quarter of 2014. Lending spreads contracted by 0.01 percentage points from the first quarter of 2014, while deposit spreads widened by 0.06 percentage points.

There was an increase in net other operating income from the first quarter of 2014, reflecting a rise in income from fixed-income instruments and equities.

Operating expenses were on a level with the fourth quarter of 2014, but rose by 3.8 per cent from the first quarter of 2014. The increase is directly related to the rise in income. The number of full-time positions declined by 268 from end-March 2014. The reduction took place in international operations and related mainly to the sale of JSC DNB Bank.

Net impairment losses on loans increased by NOK 405 million from the first quarter of 2014, which was characterised by reversals on collective impairment losses. On an annual basis, net impairment represented 0.23 per cent of average loans. Individual impairment came to 0.19 per cent of average loans, compared with 0.18 per cent in the first quarter of 2014.

Targeted efforts are being made to retain the level of quality in the portfolio through close follow-up of customers and preventive measures. Developments in industries that are sensitive to oil price changes are closely monitored. DNB's lending practices are based on a scenario with relatively low oil prices, and DNB has a robust portfolio within both oil, gas and offshore. Impairment losses in the energy portfolio were halved from the first quarter of 2014 to the corresponding period in 2015. Net non-performing and doubtful loans and guarantees amounted to NOK 8.8 billion at end-March 2015, a

reduction of NOK 1.8 billion from a year earlier.

DNB gives priority to strong, long-term and profitable customer relationships and on further developing key customer segments. The Group's wide range of products and broad expertise are key elements in efforts to strengthen customer relationships and form the basis for operations. Volume-weighted spreads are expected to be stable or to increase slightly in the period ahead.

Calculated on the basis of allocated capital, which corresponds to the external capital adequacy requirement which must be met by the DNB Group.

The decline in profits from the first quarter of 2014 to the first quarter of 2015 was mainly due to a lower recorded return, reflecting the build-up of buffer capital through an increase in the market value adjustment reserve and a higher shareholder contribution to reflect higher life expectancy. The prolonged low interest rate level and increased reserves to reflect higher life expectancy will make it challenging for life insurance companies to achieve a satisfactory level of earnings over the coming years. DNB Livsforsikring has adapted to the low interest rate level by holding a large portfolio of long-term bonds and property. Thus, it is highly likely that returns will cover the guaranteed rate of return over the next few years. In addition, DNB Livsforsikring is adapting its operations by winding up the company's public sector operations as well as the sale of definedbenefit pensions and paid-up policies with guaranteed rates of return. At end-March 2015, the public sector portfolio totalled NOK 3 billion. The portfolio is expected to be wound up in the course of 2015.

Each quarter, DNB Livsforsikring carries out a test to assess whether the company has adequate premium reserves. The test showed positive margins at end-March 2015.

In consequence of the upward adjustment of life expectancy assumptions, it will be necessary to strengthen the premium reserve

for group pensions over the next few years. At end-March 2015, the total required increase in reserves for DNB Livsforsikring's portfolio was estimated at NOK 11.7 billion for the period up to 2020, of which NOK 6.7 billion had been set aside. The shareholder contribution will be affected by the average return achieved during the build-up period. Provided that the expected return is achieved, DNB will have to cover approximately 23 per cent of the total required increase in reserves. A shareholder contribution of NOK 189 million was charged to the accounts for the January through March period of 2015.

Regulations for the implementation of Solvency II in Norwegian law have been circulated for public comment. The Ministry of Finance is expected to lay down regulations in the second quarter of 2015. The transitional rules will ensure a controlled introduction of Solvency II and will ensure that no equity injection will be required in DNB Livsforsikring.

Funding, liquidity and balance sheet

The short-term funding markets were generally sound for banks with high credit ratings in the first quarter of 2015. In spite of somewhat stronger competition for funding, DNB had ample access to short-term funding in both USD and other currencies throughout the first quarter.

In the long-term funding markets, there was also a healthy supply of capital in the first quarter. In the euro market, the volume of senior and covered bonds issued during the first quarter of 2015 increased by 6 per cent from the year-earlier period. As a result of the European Central Bank's, ECB, covered bond purchase programme (CBPP3), margins on such bonds declined slightly during the quarter. DNB's margins on senior bonds were reduced due to strong demand among investors and limited supply in the market. The latter is partly attributable to one of the CBPP3 measures, the so-called TLTRO programme (targeted long-term refinancing operations), under which banks can obtain three-year funding at a very low cost. However, margins on senior bonds have risen somewhat lately due to market unrest in Greece and the Middle East and signals from the central bank of the United States (the Federal Reserve) of possible interest rate increases.

Debt securities issued by the Group totalled NOK 853 billion at end-March 2015 and NOK 745 billion a year earlier. The average remaining term to maturity for the bond debt portfolio was 4.1 years at end-March 2015, compared with 4.5 years a year earlier.

In February and March 2015, DNB Bank issued two additional Tier 1 capital instruments with a nominal value of NOK 2 150 million and USD 750 million, respectively. The instruments are perpetual, though the bank has a redemption option on specific dates. The instruments are included in the Group's Tier 1 capital and will, seen in isolation, give an increase in the Tier 1 capital ratio of approximately 0.8 percentage points.

The Group stayed well within the liquidity limits throughout the quarter. The short-term liquidity requirement, Liquidity Coverage Ratio, LCR, remained stable at above 100 per cent throughout the first quarter. At end-March 2015, the total LCR was 122 per cent. The LCRs for euros and US dollars were 164 per cent and 219 per cent, respectively.

At end-March 2015, total combined assets in the DNB Group were NOK 3 089 billion, an increase from NOK 2 741 billion at end-March 2014. Total assets in the Group's balance sheet were NOK 2 790 billion as at 31 March 2015 and NOK 2 483 billion a year earlier. Of this, total assets in DNB Livsforsikring came to NOK 280 billion and NOK 284 billion, respectively.

Net loans to customers increased by NOK 132 billion or 9.8 per cent from end-March 2014. Customer deposits were up NOK 63 billion or 7.0 per cent during the corresponding period. The ratio of customer deposits to net loans to customers declined from 67.0 per cent at end-March 2014 to 65.2 per cent a year later. This is in line with the Group's ambition is to have ratio of customer deposits to net loans of minimum 60 per cent.

Risk and capital adequacy

Growth in the Norwegian economy is expected to decline from 2.25 per cent in 2014 to 1.2 per cent in 2015. Employment growth is expected to decrease in response to the more sluggish production increase.

The DNB Group quantifies risk by measuring risk-adjusted capital requirements. The capital requirement declined by NOK 2.8 billion from end-December 2014, to NOK 81.8 billion at end-March 2015.

Developments in the risk-adjusted capital requirement

	31 March	31 Dec.	30 Sept.	31 June
Amounts in NOK billion	2015	2014	2014	2014
Credit risk	58.6	58.8	55.1	55.6
Market risk	7.9	7.6	7.9	10.7
Market risk in life insurance	13.3	16.0	12.1	11.0
Insurance risk	2.0	2.0	2.0	1.9
Operational risk	11.0	10.7	10.7	10.7
Business risk	6.9	6.8	6.8	6.8
Gross risk-adjusted				
capital requirement	99.7	101.9	94.6	96.6
Diversification effect 1)	(17.9)	(17.4)	(16.5)	(17.1)
Net risk-adjusted capital				
requirement	81.8	84.6	78.1	79.5
Diversification effect in per cent				
of gross risk-adjusted capital				
requirement 1)	18.0	17.0	17.5	17.7

The diversification effect refers to the risk-mitigating effect achieved by the Group by having operations which are affected by different types of risk where unexpected losses are unlikely to occur at the same time.

The risk-adjusted capital requirement for credit was virtually unchanged from end-December 2014. Credit quality remains sound and stable. Industries, segments and geographic regions that are particularly dependent on the price of oil are monitored closely. The falling oil prices are not expected to have any material impact on DNB's credit portfolio in the short term. However, a prolonged period of low oil prices could present challenges for an increasing number of customers and segments. In line with expectations, the weak trend in the dry bulk market in the shipping segment continued in the first quarter, with record-low rates, resulting in a certain rise in impairment losses on loans in this segment. The quality of DNB's Norwegian commercial property portfolio is sound and stable. During the first quarter, the trend of greater price differences between the best and second best locations was reinforced.

The Norwegian housing market showed a strong development during the first quarter. There was a record-high number of housing sales, and in March, housing prices were up 7.9 per cent on a national basis compared with March 2014. However, there were sizeable regional differences. Tromsø and Stavanger were at the opposite ends of the scale among Norwegian cities, with a twelvemonth price growth of 17 and 2 per cent, respectively.

The risk-adjusted capital requirement for market risk in life insurance declined by NOK 2.8 billion during the quarter. The risk level remained relatively high. The low long-term interest rates heighten the risk that the return on the life insurance company's investment funds will not be adequate to cover guaranteed commitments.

DNB's market risk exposure in operations other than life insurance increased by NOK 0.3 billion in the first quarter. Exposures were well within established limits during the quarter.

Risk-weighted volume increased by NOK 65 billion from the first quarter of 2014, to NOK 1 152 billion. The common equity Tier 1 capital ratio was 12.7 per cent, while the capital adequacy ratio was 15.5 per cent. DNB's common equity Tier 1 capital ratio target is minimum 14.0 per cent by year-end 2016.

No material operational events were registered during the first quarter. The Group enjoyed high operational stability with few and low losses. DNB's anti-money laundering efforts were increased in 2014 and will be given high priority in 2015.

New regulatory framework Basel IV on the way

During the first quarter of 2015, the Basel Committee issued a consultative document relating to the new capital adequacy regulations for banks. Revisions to the standardised approach for credit risk have been proposed by replacing the current link between risk weights and external credit ratings with a limited number of risk factors, including the borrower's revenues, leverage/loan-to-value ratio and debt-service coverage ratio. The risk factors will vary depending on the type of exposure.

At the same time, the Basel Committee introduced a new floor that will limit reductions in risk weights when using IRB models. The purpose is to ensure that the total level of capital in the banking system does not fall below a certain threshold. In addition, the floor is intended to mitigate model risk and measurement error. The floor will be linked to the revised standardised approach and will replace the current transitional rules, which are based on Basel I ("Basel I floor").

It has not yet been clarified whether the new floor will apply to individual portfolios or to total risk-weighted assets. Nor does the consultative document say anything about the calibration of the floor. In the period ahead, the Basel Committee will consider the final calibration of the risk weights based on feedback from the consultation.

Tightening of bank lending practices

Finanstilsynet has been asked by the Ministry of Finance to consider if it would be appropriate to introduce measures at an aggregate level to dampen growth in housing prices and credit growth in the Norwegian household sector. The Ministry refers to the fact that several years of strong growth in housing prices and household debt have increased the risk that financial instability could trigger and intensify a setback in the Norwegian economy.

Finanstilsynet proposes stricter guidelines for prudent lending practices for home mortgages. This includes removing banks' opportunity to make a special prudential assessment to justify a loan-to-value ratio above 85 per cent. In addition, it has been proposed that borrowers must be able to withstand a 6 percentage point interest rate increase, which represents a 1 percentage point raise from the current guidelines. Finanstilsynet proposes to establish the guidelines in the form of regulations, which will entail a clear tightening of banks' exercise of discretion. The Ministry of Finance has circulated Finanstilsynet's proposal for comments, with a deadline of 4 May 2015.

Competition Authority recommends harmonised rules

During the past year, the Norwegian Competition Authority has carried out a survey of competition in the home mortgage market. The report was published in late March.

The Competition Authority acknowledges the banks' need to build up equity, but finds that the authorities have given too little priority to competitive aspects. Among other things, the Competition Authority takes a critical view of the relatively strong increase in the requirements over a fairly short period of time. In addition, it finds that the Norwegian capital requirements contribute to greater distortion of market competition. The financial authorities are recommended to seek to harmonise the Norwegian rules with the EU's capital adequacy regulations and abstain from imposing stricter risk weighting requirements on banks for the calculation of capital adequacy requirements.

The report includes calculations of the additional costs incurred by the banks and their customers due to the distinctively Norwegian requirements. The calculations show a 0.33 percentage point difference in marginal funding costs between Norwegian IRB banks and branches of international IRB banks operating in Norway. If the distinctively Norwegian requirements have contributed to a 0.33 percentage point rise in the general interest rate level for home mortgages, this may have increased Norwegian home mortgage customers' interest expenses by approximately NOK 6.5 billion,

according to the Competition Authority.

The Competition Authority's report is commented on in the Ministry of Finance's Financial Markets Report. According to the report, competitive considerations are always taken into account when drawing up new regulations for the financial services industry, though individual countries must take responsibility for their financial stability and adapt their regulations to the economic situation in their country. The Ministry finds that host country regulations are important in order to reconcile these considerations. In addition, the Ministry stresses that certain regulatory differences need not impair the competition in a situation with large and well-established national market players.

Macroeconomic developments

There is still moderate growth in the global economy, though there are considerable differences from country to country. GDP rose by 0.9 per cent in the euro countries in 2014. After a very weak trend throughout the summer, growth picked up slightly towards the end of 2014. In Sweden, the United Kingdom and the United States, GDP increased by close to 2.5 per cent in 2014.

Among emerging economies, the picture was mixed in the first quarter of 2015. The large commodity exporters, such as Brazil and Russia, showed a particularly weak development. The price of oil fell to just over 45 US dollars a barrel from June 2014 to January 2015. after hovering around 110 US dollars for almost four years. Since then, the price of oil has picked up somewhat, and was approximately 65 US dollars per barrel at the end of April. During the January through March period, low oil prices had different consequences in the various regions. China and other emerging markets in Asia are among the largest oil importers. Japan, Europe and the United States also import large quantities of oil. Large oil exporters include Mexico, Venezuela, Canada, Russia and many countries in the Middle East. Based on new extraction technology, the United States has built up a considerable oil producing sector in recent years. This sector has been affected by the fall in the price of oil. However, the effect of a lower oil price is expected to be positive for the US economy as a

In Norway, lower demand from the petroleum industry and a sluggish trend in private consumption contributed to reduced economic growth throughout 2014. The strong fall in the price of crude oil will reinforce the negative impulses in the future, while an expansive fiscal and monetary policy will help curb the cyclical

downturn. The economic turnaround has so far had a limited effect on the labour market. The fall in the price of oil and prospects of even lower interest rates have resulted in a pronounced weakening of the Norwegian krone, clearly improving competitiveness. The declining price of oil means lower revenues for Norway, while demand from the petroleum industry for deliveries from Norwegian companies is falling as a result of weaker profitability. The total scope of these effects depends on the extent and duration of the fall in oil prices. Even based on current oil prices, extensive oil and gas production will be profitable and ensure demand for deliveries from Norwegian companies for several decades ahead. The negative demand effects are limited by the high share of imports. In addition, a weaker Norwegian krone and lower wage inflation will stimulate mainland industries exposed to competition, which will also benefit from a certain increase in international demand.

Housing prices continued to rise through the first quarter of 2015 and were approximately 8 per cent higher at end-March than a year earlier. Price growth is expected to slow during the remainder of the year. High population growth, too little housebuilding activity and an expected prolonged low interest rate level indicate a continued moderate increase in housing prices. However, a relatively low price level, a certain rise in unemployment and lower wage inflation point in the opposite direction.

Future prospects

Economic forecasts for 2015 indicate moderate global economic growth. There appear to be increasing differences between individual countries. Economic growth is also expected in Norway, though the growth will probably slow somewhat in 2015 as a result of declining oil investments and their spillover effects on the mainland economy.

In order to build up adequate common equity Tier 1 capital, the Group will focus on dynamic management of balance sheet items to reflect exchange rate movements. Lending volumes are expected to increase at an annual rate of 3 to 4 per cent, provided that exchange rates remain stable. Volume-weighted spreads are expected to be constant. Nominal costs are expected to remain flat in 2015, excluding restructuring expenses and exchange rate movements. Impairment losses on loans in 2015 are expected to stay below normalised levels. The Group's capital level, return and payout ratio targets remain firm. The long-term tax rate is still estimated to be 25.5 per cent, but is expected to be 24.5 per cent in 2015.

Deposits with credit institutions with no agreed period of notice 1)	6 52 1	8 164	5 86

¹⁾ Recorded under "Due from credit institutions" in the balance sheet.

The cash flow statement shows receipts and payments of cash and cash equivalents during the period. The statement has been prepared in accordance with the direct method. Cash flows are classified as operating activities, investment activities or funding activities. Balance sheet items are adjusted for the effects of exchange rate movements. Cash is defined as cash and deposits with central banks, and deposits with credit institutions with no agreed period of notice.

Note 1 Basis for preparation

The quarterly financial statements for the Group have been prepared in accordance with IAS 34 Interim Financial Reporting. A description of the accounting principles applied by the Group when preparing the financial statements appears in the annual report for 2014. The annual and interim financial statements for the Group have been prepared in accordance with IFRS endorsed by EU.

When preparing the consolidated financial statements, management makes estimates, judgment and assumptions that affect the application of the accounting principles and the carrying amount of assets, liabilities, income and expenses. Estimates and assumptions are subject to continual evaluation and are based on historical experience and other factors, including expectations of future events that are believed to be probable on the balance sheet date. A description of the significant estimates and areas where judgment is applied appear in note 1 Important accounting estimates, judgments and assumptions in the annual report for 2014.

Note 2 Segments

Financial governance in DNB is geared to the different customer segments. The follow-up of total customer relationships and segment profitability are two important dimensions when making strategic priorities and deciding where to allocate the Group's resources. Special product areas are responsible for production and development for parts of the product range and for ensuring that the Group meets the needs of the various customer segments. Reported figures for the different segments will reflect the Group's total sales of products and services to the relevant customer segments. The customer segments have recently been redefined. As of 1 January 2015, DNB Finans' operations in Sweden and Denmark are included in the large corporates and international customers segment. Previously, these operations were divided between the small and medium-sized enterprises segment and the personal customer segment. Figures for previous periods have been adjusted correspondingly.

Personal customers

includes the Group's total products and activities to private customers in all channels, both digital and physical. DNB offers a wide range of products through Norway's largest distribution network, comprising branches, telephone banking (24/7), digital banking, real estate broking as well as external channels (post offices and in-store postal and banking outlets).

Small and medium-sized enterprises

is responsible for product sales and advisory services to small and medium-sized enterprises in Norway. DNB aspires to be a local bank for the whole of Norway, while offering the products and expertise of a large bank. Customers in this segment range from small businesses and start-up companies to relatively large corporate customers, and the product offerings are adapted to the customers' different needs. Small and medium-sized enterprises are served through the Group's large physical distribution network throughout Norway as well as digital and telephone banking (24/7).

Large corporates and international customers

 includes large Norwegian and international corporate customers and all customers served by DNB's subsidiary banks in the Baltics and Poland. Operations are based on sound industry expertise and longterm customer relationships.

Trading

 includes market making and other trading activities in fixed income, currencies and commodities (FICC) as well as equities, including risk management of the risk inherent in customer transactions. Markets' trading activities support the customer activities.

Traditional pension products

 includes traditional defined-benefit pension products in DNB Livsforsikring. DNB no longer offers such products to new customers.

The income statement and balance sheet for the segments have been prepared on the basis of internal financial reporting for the functional organisation of the DNB Group into segments, as reported to group management (chief operating decision maker) for an assessment of current developments and the allocation of resources. Figures for the segments are based on DNB's management model and the Group's accounting principles. The figures have been restated in accordance with the Group's current principles for allocating costs and capital between segments and are based on a number of assumptions, estimates and discretionary distributions.

Capital allocated to the segments is calculated on the basis of the Group's common equity Tier 1 capital and long-term capitalisation ambition. There are special capital adequacy regulations for insurance operations, and in these companies, allocated capital corresponds to recorded equity. For other group operations, the allocation of capital to all units is based on the Group's adaptation to Basel II, full IRB, and the capital allocated in 2015 corresponds to a common equity Tier 1 capital ratio of 14.5 per cent. The allocation of credit risk is based on the Group's internal measurement of risk-adjusted capital requirements for credit. Capital requirements for market risk are allocated directly in accordance with risk-weighted volume, and operational risk is allocated based on the respective units' total income.

- 1) See the tables below for more information about Traditional pension products.
- See the tables below for more information about other operations/eliminations.
- 3) Allocated capital corresponds to the external capital adequacy requirement (Basel III) which must be met by the Group. In consequence of stricter external capital requirements and the authorities' signals of additional capital requirements for home mortgages, allocated capital to Personal customers has been adjusted upwards in 2015.
- 4) See note 9 Impairment of loans and guarantees for an analysis of the gross change in impairment for the Group.

- 1) Loans to customers include accrued interest, impairment and value adjustments. Correspondingly, deposits from customers include accrued interest and value adjustments.
- Allocated capital for the segments is calculated based on the external capital adequacy requirement (Basel III) which must be met by the Group. Recorded capital is used for the Group. In consequence of stricter external capital requirements and the authorities' signals of additional capital requirements for home mortgages, allocated capital to Personal customers has been adjusted upwards in 2015. This resulted in a lower return on capital compared with the preceding periods.
- Total operating expenses relative to total income.
- Deposits from customers relative to loans to customers. Calculated on the basis of average balance sheet items.

Traditional pension products

The risk profile of Traditional pension products is different by nature from the risk profile of the Group's bank-related products. Higher life expectancy is one of several risk factors linked to defined-benefit pension products. In the tables below, a specification is given of pre-tax operating profits, including the costs related to the increase in reserves to reflect higher life expectancy.

- 1) The eliminations refer mainly to internal services from support units to segments and between segments. Further, intra-group transactions and gains and losses on transactions between companies in the Group are eliminated.
- 2) Group units include IT and Operations, HR (Human Resources), Group Finance including Group Treasury, Risk Management, Corporate Communications, the partially owned company Eksportfinans, investments in IT infrastructure and shareholder-related costs. In addition, Group units include that part of the Group's equity that is not allocated to the segments. Profits from repossessed operations which are fully consolidated in the DNB Group are presented net under "Profit from repossessed operations" in the internal reporting of segments. The acquired companies are included in Group units.

³⁾ Allocated capital corresponds to the external capital adequacy requirement (Basel II) which must be met by the Group.

⁴⁾ See note 9 Impairment of loans and guarantees for an analysis of the gross change in impairment for the Group.

Note 3 Capital adequacy

Capital adequacy is reported in accordance with the EU's new capital adequacy regulations for banks and investment firms (CRD IV/CRR). Valuation rules used in the statutory accounts form the basis for the consolidation, which is subject to special consolidation rules governed by the Consolidation Regulations.

Note 3 Capital adequacy (continued)

Basel III

The majority of the credit portfolios are reported according to the IRB approach. However, some portfolios are still subject to final IRB approval from Finanstilsynet. These are banks and financial institutions (DNB Bank) and large corporate clients rated by simulation models (DNB Bank).

¹⁾ EAD, exposure at default.

²⁾ Due to transitional rules, the minimum capital adequacy requirements cannot be reduced below 80 per cent of the corresponding figure calculated according to the Basel I regulations.

Note 4 Liquidity risk

Liquidity risk is the risk that the DNB Group will be unable to meet its payment obligations. Overall liquidity management in the Group implies that DNB Bank ASA is responsible for funding domestic subsidiaries, as well as international branches and subsidiaries. Liquidity risk is managed and measured by means of various measurement techniques.

The Board of Directors has approved internal limits which restrict the short-term maturity of liabilities within different time frames. The various maturities are subject to stress testing based on a bank-specific crisis and a systemic crisis and a combination thereof, and a contingency plan has been established to handle market events. In addition, limits have been approved for structural liquidity risk, which implies that lending to customers should largely be financed through customer deposits, subordinated capital and long-term funding. Ordinary senior bond debt and covered bonds are the major sources of long-term funding. The Group's ratio of deposits to net loans was 65.2 per cent at end-March 2015, down from 67.0 per cent a year earlier. The ratio of deposits to net loans in DNB Bank ASA was 123.6 per cent at end-March 2015.

The short-term funding markets remained generally sound in the first quarter of 2015, and there are now insignificant price differences between the best and second best banks. In spite of somewhat stronger competition, DNB had ample access to short-term funding in all currencies throughout the first quarter. In the long-term funding markets, there was also a healthy supply of capital in the first quarter. Margins on long-term funding improved during the quarter after the European Central Bank, ECB, presented its covered bond purchase programme as one of several measures to stimulate European economic activity. This applied in particular to the cost of new funding in the form of covered bonds, though the costs relating to senior bonds also showed a favourable trend due to strong demand among investors and limited supply in the market.

The short-term liquidity requirement, Liquidity Coverage Ratio (LCR), remained stable at above 100 per cent throughout the quarter. At end-March, the total LCR was 122 per cent, with an LCR of 164 per cent for EUR and 219 per cent for USD.

The average remaining term to maturity for the portfolio of senior bond debt and covered bonds was 4.1 years at end-March 2015, down from 4.5 years a year earlier. The DNB Group aims to achieve a sound and stable maturity structure for funding over the next five years.

Loans to customers

The portfolio of loans carried at fair value consists primarily of fixed-rate loans in Norwegian kroner and a share of margin loans in Norwegian kroner. The value of fixed-rate loans is determined by discounting agreed interest flows over the term of the loan, using a discount factor adjusted for margin requirements. The discount factor used has as a starting point a swap rate based on a duration equal to the average remaining lock-in period for the relevant fixed-rate loans. The assumptions underlying the calculation of the margin requirement are based on a review of the market conditions on the balance sheet date and on an assessment of the deliberations made by external investors when investing in a corre-sponding portfolio. A margin requirement is calculated for margin loans, and the difference between the margin requirement and the agreed margin is discounted over the average expected time to the repricing of the loan. For a further description of the instruments and valuation techniques, see the annual report for 2014.

²⁾ Short positions, trading activities.

In order to show the sensitivity of the loan portfolio, the discount rate on fixed-rate loans and the margin requirement on margin-based loans have been increased by 10 basis points.

Level 3 bonds mainly represent investments in Norwegian municipalities, country municipalities, savings banks and power companies. A 10 basis point increase in the discount rate has had insignificant effects.

Level 3 equities represent a total of NOK 5 668 million in private equity investments, property funds, hedge funds and unquoted equities in DNB Livsforsikring. The fair values of the funds are largely based on reported values from the fund managers. For private equity and property funds, the fund managers use cash flow-based models or multiples when determining fair values. The Group does not have full access to information about all elements in these valuations and thus has no basis for determining alternative values for alternative assumptions. The use of alternative values will have a limited effect on the Group's profits, as the investments are included in DNB Livsforsikring's common portfolio.

The banking group's portfolio of equities classified as level 3 was NOK 1 545 million as at 31 March 2015.

Commercial paper and bonds, held to maturity	113 611	118 667	148 491

¹⁾ Including eliminations of DNB Livsforsikring's investments in bonds issued by DNB Boligkreditt.

As part of ongoing liquidity management, DNB Bank has invested in a portfolio of securities. The portfolio can be used to regulate the liquidity requirement and as a basis for furnishing collateral for operations in various countries. Among other things, the securities serve as collateral for short and long-term borrowing in a number of central banks and as a basis for liquidity buffers to meet regulatory requirements. With effect from 1 July 2008, the international bond portfolio was reclassified from the category "fair value through profit or loss" to "held-to-maturity investments". Portfolios in this category are recorded at amortised cost and written down if there is objective evidence of a decrease in value.

In line with IAS 39, the portfolio has been reviewed to identify objective indications of impairment. No impairment losses have been identified in the portfolio.

Measurement of the reclassified bond portfolio

The reclassification in accordance with IAS 39 Financial Instruments: Recognition and Measurements requires that the value of the portfolio based on the principles applied before the reclassification must be reported. In a normal market situation, the portfolio would have been recorded at external observable prices before the reclassification. Due to the financial turmoil, there were no such observable prices in the market in 2008. In order to meet the disclosure requirement, the portfolio was thus measured at fair value according to models used for financial instruments not traded in an active market. The models were based on a regression analysis whereby historical market data (explanatory variables) which were observable even during the financial turmoil were used to explain historical changes in value in the portfolio. During the period from the fourth quarter of 2006 up to and including the second quarter of 2008, the model showed a high level of correlation between changes in given market data and changes in the value of the portfolio, which at the time was priced in an active market or through broker quotes which were believed to be fairly reliable. As of 1 January 2014, the fair value of the portfolio is determined based on broker quotes. If fair value had been used to determine the value of the portfolio in the first quarter of 2015, there would have been a NOK 14 million decrease in profits.

Effects of the reclassifications of the international bond portfolio

By measuring the portfolio at amortised cost, the value of the portfolio as at 31 March 2015 was NOK 0.5 billion higher than if the previous valuation principle had been retained. On the reclassification date, the carrying amount of the portfolio was NOK 88.0 billion, compared with NOK 16.3 billion at end-March 2015. The average term to maturity of the portfolio was 5.6 years, and the change in value resulting from an interest rate adjustment of one basis point was NOK 9 million at end-March 2015.

DNB first quarter report 2015 Unaudited 25

Note 14 Commercial paper and bonds, held to maturity (continued)

International bond portfolio

After the reclassification date, DNB has chosen to increase investments in held-to-maturity securities. According to new proposed liquidity requirements for banks, in order for the securities to be classified as liquid funds, they must qualify for immediate sale. New investments in the international bond portfolio as from 2011 mainly represent covered and government-guaranteed bonds, these investments are carried at fair value. As at 31 March 2015 the international bond portfolio represented NOK 125.7 billion. 61.1 per cent of the securities in the portfolio had an AAA rating, while 31.6 per cent were rated AA. There were no synthetic securities in the portfolio and no investments in US sub-prime bonds or Collateralised Debt Obligations, CDOs. Nor were any investments made in Portugal, Italy, Ireland, Greece or Spain. The structure of the international bond portfolio is shown below.

		DNB Group
	Per cent	NOK million
	31 March 2015	31 March 2015
Asset class

Of which reclassified portfolio		16 255

The average term to maturity of the international bond portfolio is 3.7 years, and the change in value resulting from an interest rate adjustment of one basis point was NOK 10 million at end-March 2015.

DNB Livsforsikring

Bonds held-to-maturity totalled NOK 87.7 billion in DNB Livsforsikring ASA's as at 31 March 2015, mainly comprising bonds issued by highly creditworthy borrowers. Only in exceptional cases does DNB Livsforsikring invest in bonds issued by traditional manufacturing companies.

In line with IAS 39, the portfolio has been reviewed to identify objective indications of impairment. No impairment losses have been identified in the portfolio.

- 1) Some properties in DNB Livsforsikring are classified as properties for own use in the group accounts and are recorded at fair value.
- 2) Other investment properties are mainly related to acquired companies.

Due to changes in principles, some comparative figures have been restated. See further details in Accounting principles in the annual report for 2014.

Investment properties in the Group are principally owned by DNB Livsforsikring. DNB Livsforsikring's portfolio totalled NOK 29 651 million as at 31 March 2015.

Fair value

Investment properties in DNB Livsforsikring are part of the common portfolio and are owned with the intention to achieve long-term returns for policyholders. The property portfolio is recorded at fair value on the balance sheet date. Fair value is defined as the price that would be received to sell an asset in an orderly transaction between market participants ("exit price"). The Norwegian properties are valued by using an internal valuation model. As a supplement, external appraisals are obtained for a representative selection of properties in the portfolio at regular intervals throughout the year. During the first quarter of 2015, external appraisals were obtained for a total of 10 properties, representing 31 per cent of portfolio value. The purpose of the external appraisals is to benchmark the internal valuations against independent references. Internal calculations and the values recorded in the balance sheet are 4.8 per cent lower than average external appraisals. The Swedish properties in the portfolio and partially owned properties are valued based on external appraisals.

Internal valuation model

In the internal model, fair value is calculated as the present value of future cash flows during and after the contract period. The required rates of return stipulated in the model reflect market risk. For the office portfolio, a required rate of return of 8.5 per cent has been principally used. The same general required rate of return is used for the hotel and shopping centre portfolios, but for some of the hotel and shopping centres, based on an individual evaluation, an adjustment of the required rate of return has been made in the interval minus 0.4 to plus 0.4 percentage points.

Value development and sensitivity

Changes in the value of investment properties

The value of investment properties in DNB Livsforsikring was adjusted upwards by NOK 46 million during the first quarter of 2015. There have been no significant changes in the parameters included in the valuation model.

Valuations are particularly sensitive to changes in required rates of return and assumptions regarding future income flows. Other things equal, a 0.25 percentage point reduction in the required rate of return will change the value of the property portfolio by approximately 4.0 per cent or NOK 843 million. Correspondingly, a 5 per cent change in future market rents will change the value of the property portfolio by 3.4 per cent or NOK 721 million.

¹⁾ Of which NOK 3 million represented a negative value adjustment of investment properties which are not owned by DNB Livsforsikring.

DNR Group

Note 16 Profit from investments accounted for by the equity method

Moody's and Standard & Poor's downgrades of Eksportfinans' credit rating in the fourth quarter of 2011 resulted in sizeable unrealised gains on the company's long-term funding. The effect of these unrealised gains on DNB's holding, after tax, represented NOK 11.8 billion. After reviewing the fair value of the company in connection with the closing of the annual accounts, DNB wrote down the value by an amount corresponding to unrealised gains on Eksportfinans' own debt in the fourth quarter of 2011. In 2012, 2013, 2014 and 2015, the required rate of return in the market was reduced, and Eksportfinans had sizeable unrealised losses on own debt. The impairment loss recorded by DNB in the fourth quarter of 2011 was reversed by an amount corresponding to these unrealised losses. Reversals totalling NOK 73 million were made in the first quarter of 2015. The remaining impairment loss was NOK 266 million at end-March 2015. The impairment loss in 2011 and subsequent reversals have been reported on the line "Profit from investments accounted for by the equity method" along with DNB's share of profits from the company.

Minus own bonds. Nominal amount of outstanding covered bonds in DNB Boligkreditt totalled NOK 453.0 billion as at 31 March 2015. The cover pool
market value represented NOK 557.2 billion.

Note 18 Additional Tier 1 capital

During the first quarter of 2015 the Group's subsidiary, DNB Bank ASA, issued two additional Tier 1 capital instruments. The instruments have a nominal value of NOK 2 150 million and USD 750 million (NOK 5 903 million). The instruments are perpetual but the bank can repay the capital on specific dates, first time five years after the issuing. The interest rates to be paid are floating 3 months NIBOR plus 3.25 per cent and fixed 5.75 per cent respectively. The issue in Norwegian kroner has quarterly payments while the issue in US dollar has annual payments.

The agreed terms for the instruments meet the requirements in the EU's CRR regulations, and the instruments are included in the Group's Tier 1 capital for capital adequacy purposes. This implies that DNB Bank ASA has a unilateral right not to repay interest or the principal to the investors. As a consequence of these terms, the instruments do not meet the requirement for a liability in IAS 32 and are therefore presented on the line Additional Tier 1 capital within the Group's equity. Further, it implies that the interest is not presented within the line Total interest expenses but as a reduction in Other equity. Correspondingly, seen in isolation, the benefit from the tax deduction for the interest will give an increase in Other equity and not be presented as a deduction within the line Tax expense, as it is the shareholder who benefit from the tax deduction. Accumulated interest for first quarter 2015 totaled NOK 14 million.

Equity shall be measured at historical exchange rates when the transaction currency differs from the company's functional currency. The issue in US dollars was thus converted to Norwegian kroner at the exchange rate prevailing on 26 March 2015 without any subsequent revaluation.

Earnings per share

The main purpose of the financial ratio earnings per share is to show the return for the Group's ordinary shareholders. Accumulated interest for the period, which will be paid to those investing in the additional Tier 1 capital instruments, has therefore been deducted from Profit for the period in the calculation of the period's earnings per share.

Note 19 Information on related parties

DNB Bank ASA carries loans in its balance sheets which according to a legal agreement have been transferred to Eksportfinans ASA and are guaranteed by DNB Bank ASA. Pursuant to the agreement, the bank still carries interest rate risk and credit risk associated with the transferred portfolio. According to the IFRS regulations, the loans have therefore not been removed from the balance sheet of the bank. These portfolios totalled NOK 2.7 billion at end-March 2015.

¹⁾ DNB Bank ASA carries loans in its balance sheet that subject to legal agreement have been transferred to Eksportfinans and for which DNB Bank ASA has issued guarantees. According to the agreement, DNB Bank ASA still carries interest rate risk and credit risk for the transferred portfolio. Customer loans in the portfolio totalling NOK 2.7 billion were recorded in the balance sheet as at 31 March 2015. These loans are not included under guarantees in the table.

Contingencies

Due to its extensive operations in Norway and abroad, the DNB Group will regularly be party to a number of legal actions. None of the current disputes are expected to have any material impact on the Group's financial position.

The DNB Group is subject to a number of complaints and disputes relating to structured products and other investment products.

DNB Bank ASA has brought an action against seven Norwegian municipalities for the settlement of interest swaps on commercial terms. The municipalities have stopped their payments under the agreements citing that full settlement took place upon payment of the residual value of the investments made. The bank's total claim in the civil action is NOK 825 million plus interest on overdue payments.

A civil action has been brought before a US court of law against DNB Markets Inc. (Minc) and the other arrangers of a USD 300 million Senior Note issue in 2010 on behalf of Overseas Shipholding Group (OSG). Minc's share of the note issue was approximately USD 19 million, representing around 6.25 per cent.

Basis for preparation

DNB ASA has prepared the financial statements according to the Norwegian Ministry of Finance's regulations on annual accounts, Section 1-6, on the use of IFRS. A description of the accounting principles applied by the Group when preparing the financial statements appears in the annual report for 2014.

Key figures (continued)

Definitions

- 1, 2, 3 Based on nominal values excluding impaired loans, measured against the 3-month money market rate.
- 5 Total operating expenses relative to total income. Total expenses exclude impairment losses for goodwill and other intangible assets.
- 6 Return on equity represents the shareholders' share of profit for the period relative to average equity.
- RAROC (Risk-Adjusted Return On Capital) is defined as risk-adjusted profits (shareholders' share) relative to average equity. Risk-adjusted profits indicate the level of profits in a normalised situation. Among other things, recorded impairment losses on loans are replaced by normalised losses.
- Average equity is estimated on the basis of recorded equity including allocated dividend, but excluding additional Tier 1 capital. Thus this amount corresponds to the shareholders' share of equity.
- 9 The shareholders' share of profit for the period relative to average risk-weighted volume.
- 20 Total assets under management for external clients in DNB Asset Management, DNB Livsforsikring and DNB Skadeforsikring.
- 21 Total assets and customer assets under management.
- 23 Total deposits from customers, assets under management and equity-linked bonds.
- The Annual General Meeting on 23 April 2015 authorised the Board of Directors of DNB ASA to acquire own shares for a total face value of up to NOK 325 759 772, corresponding to 2 per cent of share capital. The shares shall be purchased in a regulated market. Each share may be purchased at a price between NOK 10 and NOK 200 per share. The authorisation is valid for a period of 12 months from 23 April 2015. Acquired shares shall be redeemed in accordance with regulations on the reduction of capital. An agreement has been signed with Norwegian Government/Ministry of Trade, Industry and Fisheries for the redemption of a proportional share of government holdings to ensure that the government's percentage ownership does not change as a result of the redemption of repurchased shares.
- 27 The shareholders' share of profits relative to the average number of shares excluding any holdings of own shares.
- The shareholders' share of profits excluding profits from operations held for sale. Holdings of own shares are not included in calculations of the number of shares.
- 30 Closing price at end of period less closing price at beginning of period, including dividends reinvested in DNB shares on the dividend payment date, relative to closing price at beginning of period.
- 32 The shareholders' share of equity, excluding additional Tier 1 capital, at end of period relative to the number of shares.
- Closing price at end of period relative to annualised earnings per share.
- 35 Share price at end of period relative to equity per share.
- Number of shares multiplied by the closing share price at end of period.
