¹⁾ DNB performed a recalibration of the IFRS 9 models used for stage 1 and stage 2 loans and financial commitments in the second quarter of 2019. The net effect of the recalibration was a decrease in expected credit loss of NOK 6 million. As the recalibration resulted in both increases and decreases on a financial instrument level, the effect is included in 'Increased expected credit loss' and 'Decreased (reversed) expected credit loss'.

1.8.1 Primary capital - DNB Group

Capital adequacy is calculated and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD IV). The regulatory consolidation deviates from consolidation in the accounts and comprises the parent company, subsidiaries and associated companies within the financial sector, excluding insurance companies. Associated companies are consolidated pro rata. The figures as at 30 June are partially based on estimates.

On 31 December 2019, Norway fully implemented the EU's capital requirements legislation CRR/CRD IV, and the so-called Basel I floor was removed. The additional capital requirements due to the transitional rules have been removed from the historical figures. The harmonised rules include the introduction of the SME discount factor.

1.8.5 Primary capital - including DNB Bank ASA and DNB Bank Group

Capital adequacy is calculated and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD IV). The regulatory consolidation deviates from consolidation in the accounts and comprises the parent company, subsidiaries and associated companies within the financial sector, excluding insurance companies. Associated companies are consolidated pro rata. The figures as at 30 June are partially based on estimates

On 31 December 2019, Norway fully implemented the EU's capital requirements legislation CRR/CRD IV, and the so-called Basel I floor was removed. The additional capital requirements due to the transitional rules have been removed from the historical figures. The harmonised rules include the introduction of the SME discount factor.

1) Deductions are made for significant investments in financial sector entities when the total value of the investments exceed 10 per cent of common equity Tier 1 capital. The amounts that are not deducted are given a risk weight of 250 per cent. The increased deduction is due to the investment in Fremtind.

2) Investments in Tier 1 and Tier 2 instruments issued by the Group's insurance companies are deducted from the Group's Tier 1 and Tier 2 capital.

3) Tier 1 and Tier 2 capital in DNB Bank ASA not included in consolidated own funds, in accordance with Articles 85-88 of the CRR.

1.8.6 Cross-sectoral financial group

Financial groups that consist of both a credit institution and an insurance undertaking and have been defined by the authorities as a “financial conglomerate” or cross-sectoral financial group, have to report capital adequacy on a consolidated basis. The cross-sectoral calculation tests that the DNB Group complies with both sectoral requirements, the “capital adequacy requirement in accordance with CRD IV” and “the Solvency II requirement”. Intra group capital is excluded from the calculation.

1) Loans to customers include accrued interest, impairment and value adjustments. Correspondingly, deposits from customers include accrued interest.

2) Allocated capital corresponds to the external capital adequacy requirement (Basel III) which must be met by the Group.

Both the establishment of Fremtind with effect from 2019 and the transfer of personal risk products to the company with effect from 2020 affects income and cost in this segment. Up until year-end 2018, the activities in DNB Forsikring were consolidated into the Personal customer segment, while as from January 2019, the segment's profit from the non-life insurance activities consists of sales commissions from Fremtind. The transfer of personal risk products from DNB Livsforsikring to Fremtind in the second part of the merger has a similar effect.

1) Profit earned that is included as equity in the financial statements must be replaced by the reconciliation reserve in the solvency balance. The reconciliation reserve includes profit earned, but is based on the valuation of assets and liabilities in the solvency balance. The reconciliation reserve includes the present value of future profits. The value of future profits is implicitly included as a consequence of the valuation of insurance liabilities.

2) The transitional rules imply that technical insurance reserves in solvency capital calculations are carried at book value, whereby insurance liabilities are calculated based on the contracts' guaranteed rate of return. There will be a 16-year linear phase-in period for technical insurance reserves measured at fair value up to 2032. In addition, the transitional rules imply that the stress factor for equities acquired prior to 1 January 2016 will be increased from 22 to 39 per cent over a seven-year period.

3) Deferred tax assets.

4) Diversification between market and counterparty risk and insurance risk.

5) Future discretionary bonus (FDB) is included in technical provisions and is risk absorbing when calculating the solvency capital requirement.
