Exposure at default by industry segment

Exposure at default, EAD, is the share of the approved credit that is expected to be drawn at the time of any future default at the same time as there is a downturn in the market. The tables show the EAD in DNB's credit portfolio and is calculated by using external credit conversion factors that are aligned with regulatory requirements.

Capital adequacy is calculated and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD). The regulatory consolidation deviates from consolidation in the accounts and comprises the parent company, subsidiaries and associated companies, excluding insurance companies. Associated companies are consolidated pro rata.

Capital adequacy figures include part of the interim profit. For quarterly figures, the highest of the dividend payout ratio of the preceding year and average of the dividend pay-out ratio for the past three years has been deducted from interim profit, in accordance with CRR.

Financial groups that consist of both a credit institution and an insurance undertaking and have been defined by the authorities as a "financial conglomerate" or cross-sectoral financial group, have to report capital adequacy on a consolidated basis. The cross-sectoral calculation tests that the DNB Group complies with both sectoral requirements, the "capital adequacy requirement in accordance with CRD" and "the Solvency requirement". Intra group capital is excluded from the calculation.
