The pension specialist

A specialist has special expertise and skills in a limited area.

There are many specialists in many areas. Vital is the pension specialist

Vital Forsikring ASA and Vital Link AS together (Vital) represent the life insurance and pension business area of the DnB NOR Group. Vital Forsikring is the largest pension company in Norway and Vital Link AS is the country's undisputed leader in unit-linked insurance. Vital Eiendom is one of Norway's largest real estate managers, while Vital Pekon has a leading position in pension advisory services.

Together, the Vital companies have total assets of more than NOK 200 billion, a workforce of around 920 and more than 900 000 customers. The main functions are in Bergen and Trondheim, with important sales and market functions in Oslo. The company is represented throughout Norway through its own sales outlets and DnB NOR's branch network, and through independent distributors and the Internet (vital.no).

Bjørn Østbø has been managing director of Vital Forsikring ASA since December 2003.

A long history

The creation of DnB NOR through the merger of DnB and Gjensidige NOR in December 2003 resulted in the merger of Vital Forsikring and Gjensidige NOR Spareforsikring on 9 March 2004 under the name of Vital Forsikring ASA.

Vital Forsikring ASA was established in 1990 on the merger of Hygea and Norsk Kollektiv Pensjonskasse, and in 1996 Vital became part of the DnB Group.

Gjensidige NOR was established in 1999 when Gjensidige Livsforsikring and NOR Forsikring amalgamated in connection with the formation of Gjensidige NOR. Gjensidige Livsforsikring was established in 1992 when Gjensidige Forsikring acquired the Forenede Group and merged the companies' life insurance activities.

Vital Forsikring ASA can trace its roots back to 1847 when Christiania Almindelig Gjensidige Forsørgelsesanstalt was founded. The company changed its name to Gjensidige Liv in 1893 and it subsequently merged with Glitne (1968) and Samtrygd (1985). Hygea was established in 1884, while Norsk Kollektiv Pensjonskasse was formed in 1938.

Pension saving

Vital Forsikring offers group pension insurance to the commercial and public sectors, whether based on defined benefits or defined contributions. In the individual market, long-term savings products are provided in a number of areas, including individual pension agreements, annuities and saving with a choice of investment profile (unit-linked products). The corporate market accounts for roughly half of Vital's managed funds, while the individual market makes up 40 per cent and public sector clients the remainder.

Performance culture

Vital sets specific and ambitious goals for most of its business activities. Systematic plans and procedures are then established to

ensure that these goals are met. This is called a performance culture - and in this connection Vital's co-operation with the Norwegian Biathlon Association is a particular source of inspiration.

Pension specialist

The concept of Vital the pension specialist relates to the company's expert understanding of the Norwegian pension system and how the customers can be assured of financial security and flexibility. Vital's frontline expertise relates to its understanding of the links between the national insurance, occupational pension schemes and individual cover, and its ability to provide sound advice and products tailored to the specific requirements of companies, enterprises and individuals.

Strategic platform

Vital's strategic platform consists of its vision, business concept and brand values.

Vision: Vital makes the future simpler.

Vital's vision is to make the future simpler, primarily for the customers, but also within the organisation and in the life and pension industry. Vital believes it can make an important contribution by helping to provide policyholders with a sound financial base through saving and insurance, so that life in the future is as simple as possible for them when they reach retirement age or become disabled. Similarly, Vital helps to ensure that, in the event of a death, the survivors have uncomplicated financial circumstances. Vital's vision is also to make saving and insurance easier to understand through well presented products and services, good advice and clear communication.

Business concept: Vital's function is to ensure that the customers have financial security and flexibility.

Through Vital's competence, attitudes and presentations the customers' financial security and flexibility shall be ensured throughout each phase of life. Vital's expertise in matter related to the national insurance, occupational pension schemes and individual insurance shall be combined with sound advice and the ability to understand the customers' needs. The customers shall perceive Vital's products and services as being simple and comprehensible, making a major contribution to their future financial security.

Brand values: Credibility - Helpful - Sporty

Credible -

Vital shall be a sound and safe company that inspires confidence. A company to trust. A company that keeps its promises.

Helpful -

Vital shall be accessible and versatile, characterised by friendliness and attentiveness. Contact us and we will get it done.

Sporty -

in the athletic sense of making every possible effort.

“In the long run, you can only achieve what you are aiming for...”

Ole Einar, perfectionist

Speciality: Biathlon trainer

Bjørndalen has a personal biathlon trainer who, naturally enough, is particularly focused on shooting skills. But nonetheless he insists that a good mental attitude is even more important. When you are aiming for 5 bull's eyes in 20 seconds, and your pulse is racing, it's a good idea to have trained a lot. And that's what Ole Einar has done.

Vital specialist in performance management

The most important aspect of Bodil Hope's work is not meeting goals, but meeting people. Her special interests are cultural development, management development, coaching and process management. She makes Vital's managers and staff more aware of their own performance, in relation to target figures and personal development, and in their interaction with colleagues, employees and customers. A structured approach with clearly defined targets and a focus on work targets and initiatives is important. So is an awareness of the importance of networks and co-operation. For Bodil, a performance culture is a prerequisite for achieving results.

Growth and change

Pensions are a matter of great public concern in Norway, and are likely to remain so for years to come. The pension market is characterised by strong growth and major changes. Vital is a pension specialist and results are at a record level.

There is increasing demand for contribution-based pension schemes in the corporate sector. It had been expected that small and medium-sized companies would choose to have their compulsory occupational pensions based on contribution-based schemes, but a number of large companies are also considering switching all or part of their present schemes from benefit-based to contribution-based schemes. This trend is likely to continue in the coming years.

The number of contribution-based schemes provided by Vital increased in 2005, corresponding to more than 20% of the total at year-end. Nevertheless, in the foreseeable future schemes of this kind will account for only a small proportion of Vital's total pension fund assets, even though the proportion is growing.

In the public sector there is a steady transfer of clients to the private companies. Vital was pleased to welcome four new municipal clients in 2005, and a further two have joined us in 2006. The level of transfers is expected to increase in the period ahead, and Vital is well prepared to welcome new municipal clients and other clients from the public sector.

The low level of interest rates led to great interest in Vital's products with a guaranteed return in 2005. Premium income was 90 per cent up on 2004, truly a formidable increase. Even with the increase in interest rates that took place during the year, our guaranteed products were still attractive. However, looking ahead, it is likely that unit-linked products will account for an increasing proportion of the market.

The regulatory environment governing our activities is also changing. A number of matters related to the pension reform remain to be clarified before the reform comes into force in 2010. At the same time, we are preparing for the introduction of new legislation that will modernise the industry. The overall effect of these changes will be to promote competition between the companies and make pension insurance simpler for the customers.

The continuous focus on pensions in the coming years will mean that both companies and individuals will be anxious to ensure that their pension schemes are good enough. For Vital, this will present interesting market opportunities.

2005 was a very good year for Vital, with profits for allocation to policyholders and the owner at a record level, and 80 per cent up on 2004. Total assets at year-end exceeded NOK 200 billion, reinforcing Vital's position as Norway's largest pension company. The good performance was in no small measure due to the untiring efforts of our personnel.

Vital is a specialist in pensions, and our customers know that our expertise in the national insurance, occupational pension schemes and private pension schemes is at their disposal. We are well prepared to participate in growth and to respond to changes - and to increased competition in the market.

A handwritten signature in dark ink, written in a cursive style. The name 'Bård Benum' is clearly legible.

Bård Benum
Managing Director

2005 in brief

The merger of Vital Forsikring ASA and Gjensidige NOR Spareforsikring ASA in March 2004 made Vital the largest life and pension company in Norway. This position has been subsequently strengthened and at the end of 2005 Vital had total assets in excess of NOK 200 billion, a workforce of around 920 and approximately 900 000 customers. The main functions are in Bergen and Trondheim, with important sales and market functions in Oslo, as well as offices and sales representation throughout Norway.

The profit for allocation was NOK 5.7 billion, with NOK 4.5 billion allocated to policyholders and NOK 1.2 billion to the owner, before tax.

The return on book values and the value-adjusted return were 7.3 and 8.3 per cent, respectively (7.1 and 6.5 in 2004). Including changes in unrealised gains on long-term securities the return was 7.7 per cent (7.7 per cent in 2004). Norwegian equities showed the best performance, providing a return of 42.5 per cent.

Vital reinforced its position as market leader in the field of life and pension insurance in Norway, with more than 35 per cent of the market for managed customer funds.

In the corporate market, Vital is one of the two largest providers of pensions with total assets of NOK 91.5 billion and premium income of NOK 8 billion in 2005.

In the individual market Vital is by far the leading company with premium income of NOK 14.9 billion, an increase of 56 per cent on the previous year. The sharp increase was mainly attributable to products with a guaranteed return.

Vital is the largest private insurance company in the public sector with a total of 57 municipal clients. In 2005 two new municipal authorities - in Kautokeino and Notodden - decided to transfer their schemes to Vital with effect from 1 January 2006.

Speciality: ski waxer

Svein Ivar Moen is a ski waxer who has literally laid the foundations for many medals. From waxing sheds around the world he has headed the waxing team for the Norwegian national biathlon squad. Using advanced methods, he makes things go smoothly for some of the world's best biathlons.

Vital specialist in contribution-based pensions

Wenche Seljeseth is development director in the corporate market and has been with Vital for 7 years. Her special area is contribution-based pensions, an area where Vital has indeed left tracks to follow as the market leader. Wenche is focused on the constant development of products in this area, where the period from the initial concept to the launch of a new product is very short. Her aim is to attract talented personnel and ensure that there is continuous process of development.

Corporate Market wins largest ever pension agreement

Vital has reinforced its position as the largest provider of group pension insurance in the private sector. In 2005 the market share rose by more than one percentage point from the start of the year until the end of third quarter when it stood at 46.2 per cent.

NOK 91 billion

The Corporate Market division is responsible for the development, sale and delivery of pension saving and pension insurance products, as well as pension fund services, for the corporate market. Vital's sales and advisory services are carried out by the company's own advisers and by external insurance brokers, and at year-end 2005 customers' managed funds totalled NOK 91.5 billion, divided among 8 000 companies and 285 000 members.

Director Geir Nysetvold heads Vital's Corporate Market, while the directors Frode J. Hansen and Torbjørg Vanvik are the respective heads of Sales - Corporate Clients and Customer Service - Corporate Clients.

Historic agreement

The response from the corporate market was at a good level in 2005, with many companies choosing to transfer their pension schemes to Vital and net inflows totalling NOK 0.7 billion. Since the merger in March 2004 Vital has received a net inflow amounting to NOK 3 billion.

The strong focus on defined contribution-based pensions has strengthened Vital's position. A milestone was reached in 2005 when the Norwegian Post Office chose to establish its contribution-based pension scheme with Vital. The scheme covers more than 22 000 employees and is the largest pension agreement ever made in Norway. In 2005, Vital's share of the contribution-based pension market from 30.7 to 34.2 per cent, as at the end of the third quarter.

In the area of benefits-based pension schemes, Vital has maintained both its market share and profitability. Schemes of this kind account for the vast bulk of occupational pension market, and despite the increasing level of transfers to contribution-based schemes little new business in this area, benefits-based schemes will retain their dominating position for the foreseeable future.

Introduction of compulsory occupational pensions

The Compulsory Occupational Pension Act came into effect on 1 January 2006 which requires 60 000 companies with a total of 550 000 employees to have established pension schemes in accordance with the new legislation by the end of 2006. Comparisons in the financial press show that Vital has a market product that is attractive in terms of both quality and price.

The new Act relating to compulsory pension has resulted in considerable intensification of the competitive situation, with several new pension providers in the market. Vital is intent on capturing a significant proportion this major new market. As well as selling products through its own distribution outlets, Vital anticipates considerable sales through DnB NOR Bank.

In 2006 Vital will again be offering corporate group life products and other personal insurance cover.

The market for occupational pensions is changing and growing rapidly, the more so because of the new legislation. The changes are reflected in the increasing transition from benefits-based to contribution-based schemes and preparations for new regulations governing insurance activities which take effect in 2008. Vital's aim is to take proper care of its customers during the processes of change, focusing on customer satisfaction and actively promoting our position as a pension specialist.

Sharp increase in contribution-based pensions (NOK 1 000)

“All hands on deck!”

Atle, Amphibian

Speciality: Amphibian cars

People with a special interest in amphibian cars from Norway, Sweden, Denmark, the Netherlands, Germany, Belgium and England, plus a few Italians with wealthy fathers make up Europe's amphibian fleet. 150 devoted enthusiasts meet in Europe once a year. It is the only place where you can get help to repair a Schwimmwagen 166 from 1943!

Vital specialist in business processes and automation

For simplicity's sake, the department is called the Development Section - Public Market.

He himself is Vidar Eide. He is a senior project manager with the title Process and Systems Co-ordinator. He is a specialist in business processes and automation, including higher quality and productivity related to everyday tasks. He has been working on the development and implementation of electronic work processes and electronic filing since 1995. Sometimes it's important that things don't just float around.

Public sector – largest of the private companies

The results from the Public Market business area were considerably better in 2005, with the interest rate, administration and risk result all showing an improved performance.

NOK 14 billion

The Public Market is responsible for marketing, service and follow-up functions related to customers with a public pension scheme. The Public Market has around 250 clients and total assets of NOK 14.6 billion. Director Kjerstin Fyllingen heads Vital's Public Market business area.

57 local authorities

Of the 92 local authorities which have chosen a private company to cover their pension requirements, 57 are clients of Vital. In January 2006 two local authorities - Notodden in Telemark and Kautokeino in Finnmark - transferred their pension schemes to Vital. Three of Vital's municipal clients put their pension schemes out to tender in the autumn of 2005, and all of them decided to stay with Vital.

The process of adjustment has continued within the Public Market business area following the merger of Vital and Gjen-sidige NOR Spareforsikring in 2004. All customer contracts have now been established in a new and common data platform.

The Public Market section still has work to do, especially in terms of improving the efficiency of customer reporting procedures. The level of electronic processing of reports and data will increase greatly in 2006 and thus contribute to operational effi-

ciency. New electronic tools are now in place for case processing and are gradually being introduced in other areas.

Profitable growth

Vital is greatly concerned to ensure that new customers are profitable for both the owner and existing customers. Many pension contracts have such a high expected disability rate that they represent a considerable risk of loss for the provider. At a time characterised by a community of interests among large groups of customers, individual contracts can contribute to lower profitability for the other customers.

Because of the profitability requirement, Vital has refrained from competing for certain pension contracts, and this will continue to be company policy in 2006.

Considerable market potential

The public pension market is growing strongly and is likely to be worth more than NOK 200 billion within three years. This is the same as the current level of group pensions in the private sector.

While Vital has a considerable market share of corporate sector business, Kommunallandspensjonskasse (KLP) continues to dominate the public sector market. In 2005, seven local authorities chose to leave KLP and place their pension schemes with a private company, the largest number to do so since 2001.

There is every reason to believe that the private proportion of this market will grow considerably in the next few years.

Number of municipal clients insured by private life insurance companies

“I’d never have won without the help of my better half....”

Thor, side-car driver

Speciality: side-cars

For Norway’s 220 registered side-car owners, the Crystal Rally is possibly the highlight of the winter. It was held for the first time in 1970 and was an immediate success. This unique event brings together the members of Norway’s only side-car club where they can interact socially and professionally and, most of all, enjoy the rally!

Vital specialist in savings products

Bente Stavang Tvedt heads the section for product development and business systems, with savings products as her speciality.

These are products for the individual market with a guaranteed rate of return, or with a choice of investment profile. She has been with Vital for almost 23 years and has broad experience in the development of products offering alternative areas of investment for customer funds. It pays to save for the future.

Individual Market – record high demand

2005 was another record year for Vital's Individual Market. More and more people are becoming aware of the pension gap and of the need for personal savings for their retirement. The demand from our customers has never been higher.

NOK 76 billion in managed funds

The Individual Market business area is responsible for products with a guaranteed rate of return from Vital Forsikring ASA and fund saving with a choice of investment profile (unit-linked products) from Vital Link AS. The Individual Market business area is headed by director John Magnar Bøe.

Vital is Norway's largest provider of pension insurance to the individual market and at the end of the third quarter the company had a market share of 50 per cent and total managed funds of NOK 76.2 billion at year-end.

Premium income 56 per cent up

The low level of interest rates and rising share prices which characterised the market in 2005 resulted in a good return for Vital's customers. Premium income was 56 per cent higher and totalled NOK 14.9 billion.

The sharp rise in premium income was mainly due to traditional products with a guaranteed rate of return and which have been a more attractive investment than bank deposits. In marketing this product Vital has not sought to compete with bank deposits, and this is reflected in the minimum subscription amount and the establishment costs that are payable by the customers. For the year as a whole, this was nevertheless not Vital's most popular pension saving product. Sales of insurance products with a choice of investment profile were also at a good level, but slightly down on 2004 which was a record year.

DnB NOR - the main channel of distribution

Vital offers pension insurance through three channels of distribution: DnB NOR's Individual Market, Vital's own team of insurance and financial advisers, and external sales outlets. DnB NOR was the largest channel of distribution in 2005, with a noticeable increase in sales. Sales were also higher through our external advisers, where confidence in Vital following the merger is reflected in the closer co-operation that has been established. Steps taken to provide an advisory service through Vital's own sales organisation with a special focus on pensions is now starting to be rewarded in the form of increased sales.

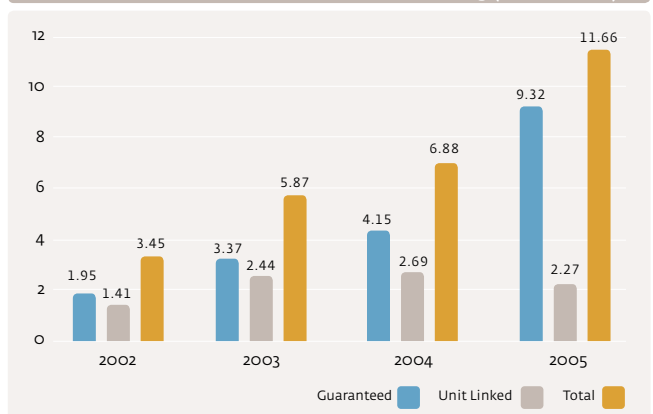

On the production side, individual pension insurance activities were characterised by higher cost efficiency in 2005, in relation to establishment, maintenance and settlement procedures. A main goal has been to invest inflows of customer funds quickly and ensure that the service provided meets customer expectations. At year-end, Vital had management responsibility for around 830 000 agreements, an increase of 2 per cent on the previous year.

Political clarifications

In May 2005 a broad majority of members of the Storting reached agreement on the Pension Reform. The debate surrounding future benefits under the National Insurance have contributed to a greater public awareness of the need for individuals take more responsibility for saving for retirement. In 2006, early retirement and disability pensions will be central political issues.

Further market growth is expected in 2006, but at the same time Vital will be closely monitoring developments in order to identify changes in customer behaviour and possible changes in savings preferences as the expected increase in Norwegian interest rates takes effect.

Total sales: Individual Market - Vital 2002-2005 (NOK billion)

Asset management – buoyant stock markets

The global economy grew strongly in 2005, and the prospects for growth in 2006 are good. The combination of sound growth and relatively low inflation is contributing to good earnings in the corporate sector, which in turn has a positive effect on the stock markets.

The Chinese economy grew by more than 2 per cent in 2005, and this has been especially beneficial for the Japanese economy where, after many difficult years, there are now clear signs of recovery. Global growth has increased the cost of raw materials, and while raw material producers like Norway can celebrate, most other countries are despairing at the high price of oil and petrol. The rising price of petrol has increased the fear of inflation, and as a result the key rates have been carefully increased in several countries.

In 2005, Vital recorded a value-adjusted return of 8.3 per cent.

Equities

2005 was a good year for equities. The stock markets were especially strong in Europe, Japan and Norway. In the latter two, the markets rose by more than 40 per cent, while the European markets ended up 21 per cent higher. By comparison, the global index rose by 14 per cent, measured in local currency.

Slightly less than 20 per cent of Vital's equities portfolio was invested in Norwegian securities at the end of 2005.

Vital's equities portfolio, after adjusting for currency hedging, provided an overall return of around 22 per cent.

Interest rates

The increasing fear of inflation resulted in a slight rise in interest rates in 2005, more so in the USA than in Europe. The higher rates led to relatively modest developments for the global bond portfolio which showed a yield of 3.4 per cent in 2005.

Interest rates are lower than the levels recorded previously in a similar economic climate. As a possible explanation, there are many who hold the view that this is due to the increased demand from pension funds and life insurance companies for long-term securities, as part of the process of adapting to new regulations.

In the USA it is expected that the central bank is approaching the end of a process which has seen the key rate rise from 1 per cent in mid-2004 to 4.25 per cent at the end of 2005. In December, the European central bank increased the key rate from 2 per cent to 2.35 per cent, and a further rise in European key rates can be expected in 2006.

In Norway, the central bank has increased the key rate from 1.75 per cent to 2.25 per cent since the summer of 2005, and has indicated that it will continue to conduct a gradually tighter monetary policy in the period ahead. Norwegian long-term rates increased in pace with the global rates during the second half of 2005 which contributed to the relatively low yield on the Norwegian bond portfolio in 2005. Vital's Norwegian bond portfolio showed a yield of 3.8 per cent.

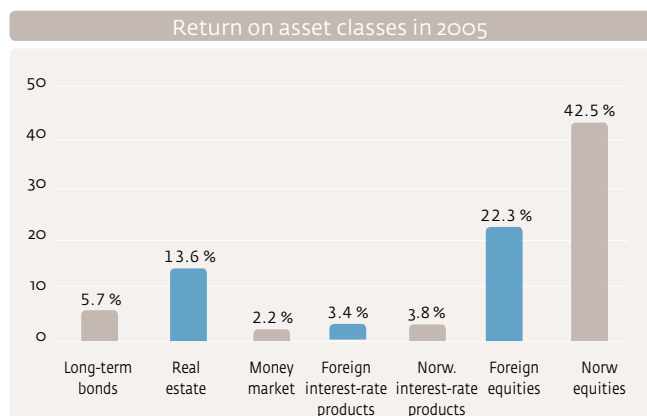

Foreign currency

Vital has a foreign currency strategy which hedges all of the company's exposure to foreign real estate investments and the international bond portfolio. Between 80 and 100 per cent of Vital's investments in international equities are hedged.

In the course of 2005, the Norwegian krone firmed by 3 per cent in relation to the Euro, but weakened by 12 per cent in relation to the US dollar.

Long-term bonds

In order to secure a stable and satisfactory yield in the coming years, Vital has established a well-diversified long-term bond portfolio. This has been done over a considerable period and at year-end 2005 the overall value of the portfolio was NOK 51.2 billion, with an average maturity of 4 years.

Real estate

Net purchases of real estate in 2005 totalled NOK 1.7 billion in 2005, including a 50 per cent interest in a shopping centre outside Stockholm and several major office premises in Oslo. Due to a 15 per cent increase in the level of managed funds, the proportion of investments attributable to real estate remained largely unchanged at about 12 per cent in 2005.

The value of the real estate portfolio increased in 2005 due to a lower vacancy rate and better market terms in the form of higher lease income.

The real estate portfolio provided a return of 13.6 per cent in 2005, with gains on disposal accounting for 1.2 percentage points, while higher lease income and a decline in the vacancy rate accounted for 2.6 percentage points and a decline of 0.25 percentage points in the required rate of return made up 3.2 percentage points.

Better than benchmark

During the period, the overall return was more than was achieved by comparable benchmark indices in 12 out of a total of 15 mandates.

Ethical guidelines

In 2004 Vital introduced ethical guidelines - Socially Responsible Investment (SRI) - for its asset management activities. The company wishes to contribute to a sustainable social development which takes account of the environment, ethics and social conditions. Vital shall be associated with high ethical standards. Further information appears on page 15

In 2005, 35 companies were excluded from Vital's investment universe because of breaches of Vital's specific SRI criteria related to the production of weapons of mass destruction, tobacco and pornography. This corresponds to around 2.5 per cent of the investment universe, measured on the basis of the Morgan Stanley Composite Index (MSCI).

New mandates

In 2005 Vital issued two new external mandates, one in the area of Emerging Markets and one of the hedge fund type, in order to achieve further differentiation of the portfolio.

Three mandates were terminated in 2005.

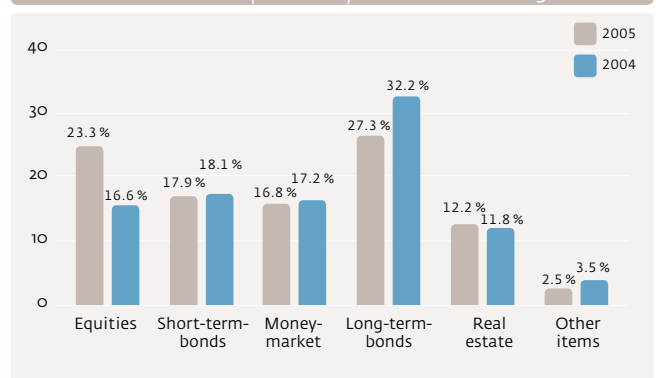

During the year, Vital's activities were expanded to include lending international equities and bonds. This activity, referred to as security lending, provided income of around NOK 13 million in 2005.

Organisation and management

The Finance & Investment Division is responsible for management of the company's funds which are invested under a number of individual mandates. Most are placed with DnB NOR Kapitalforvaltning, while some are held by external investment managers such as Schroeders, AKO Capital, ABN Ambro Mondrian, Citigroup and Merrill Lynch.

Director of finance Tom Rathke heads Vital's Finance & Investment Division and is chairman of Vital Eiendom AS.

Breakdown of return by asset class in 2005

“It doesn’t help to run faster if you’re going in the wrong direction”
Anne, orienteer.

Specialist in surveying

A surveyor finds and draws in details that are relevant for orienteers, and removes details that are not. There are four main elements: completeness, classification and simplification, contour exactness and neighbour-exactness. All the details must be correctly placed in relation to each other and to north. The surveyor has a number of aids to help him/her in this work. Two of the main ones are pacing and sighting.

Vital specialist in ethical investments

If you are not properly prepared in advance, you can’t see the wood for the trees. But Dilly S. Skomedal does. She is a specialist in ethical investment. As well as striving to comply with laws and regulations, Vital endeavours to exclude companies that do not meet its ethical guidelines. This means that companies engaged in the production of tobacco, pornography and strategic components for use in weapons of mass destruction are excluded. Vital has a dialogue with companies which breach international conventions on human rights, child labour, working conditions, corruption etc. Dilly greatly appreciates that ethics and social responsibility are increasingly in demand, and that ethical investments give a competitive advantage.

Vital's ethical management

Vital wishes to contribute to a sustainable social development through responsible business practices which take account of the environment, ethics and social conditions. Vital shall be associated with high ethical standards. In 2004, against this background, Vital's Board of Directors adopted ethical guidelines (Socially Responsible Investments) for the management of the company's financial assets.

Under these guidelines Vital is required to be particularly alert to transactions and actions which entail a risk of complicity in unethical practices, the violation of human and employee rights, corruption and environmental vandalism.

The guidelines distinguish between general and specific criteria in the management of the company's funds.

General criteria

The general criteria are based on internationally recognised principles and guidelines:

- UN Global Compact
- OECD guidelines for multinational companies

Initiated by the UN in 1999, Global Compact is based on 10 principles related to human and employee rights, the environment and anti-corruption. Global Compact is a worldwide network of businesses, governments, employee organisations, civil organisations and the UN. Its aim is dialogue and joint action between the network parties in order to promote a sustainable and inclusive global economy. Further information about Global Compact is available at www.unglobalcompact.org.

The OECD guidelines for multinational companies is a set of guidelines recommended by the member countries of the OECD and by Argentina, Brazil, Chile and Slovakia. The guidelines are based on principles and standards related to human rights, openness, anti-corruption, tax, employee relations, the environment and consumer issues. The aim of the guidelines is to achieve sustainable development through socially responsible commercial operations. Further information about the OECD guidelines for international companies is available at www.oecd.org.

In March 2006 Vital was in dialogue with two companies to clarify whether parts of their activity may be in conflict with Vital's general criteria.

Specific criteria

In addition to its general criteria, Vital has defined a set of specific criteria which is unique to Vital.

Under these criteria, Vital will not invest in companies involved in:

- Production and distribution of strategic components for use in weapons of mass destruction (exceptionally destructive war materials such as NBC weapons (Nuclear, Biological, Chemical), landmines and cluster bombs
- Production of tobacco
- Production of pornography

At year-end 2005 Vital had excluded 35 companies, or around 2.5 per cent of the investment universe measured as a proportion of global equities. An updated list of excluded companies is available at www.vital.no.

Vital has chosen three methods and approaches in the way it monitors the implementation of the ethical guidelines for the portfolio: shareholder advocacy, screening and exclusion.

Shareholder advocacy

Active ownership is exercised when, through active dialogue, Vital - alone or along with other shareholders - seeks to influence the company in line with Vital's general guidelines for ethical investments. If the company shows little inclination to make the necessary changes, Vital will consider excluding the company from its investment universe.

Screening

The production and distribution of strategic components for use in weapons of mass destruction, as well as the production of pornography and tobacco, are entered as a filter to exclude companies engaged in these areas of activity.

Exclusion

Where there is documented violation of international conventions and agreements, companies may be excluded from the investment universe on the basis of an individual assessment. At the outset, Vital will not invest in companies whose activities are based on the systematic infringement of ethical norms.

Management

The senior management group is responsible for managing Vital Forsikring ASA and the life insurance and pension business of the DnB NOR Group, which comprises Vital Forsikring ASA and Vital Link AS.

Vital's senior management group consists of the following:

Bård Benum (b. 1962)

Managing director of Vital Forsikring ASA. Benum graduated in civil engineering, specialising in industrial economics, at the Norwegian University of Science and Technology (NTNU) in Trondheim. He has previously held various senior positions with Gjensidige Bank, the Reitan Group, Statoil and Norsk Hydro.

Geir Nysetvold (b. 1961)

Director of Corporate Clients. A civil engineer from NTNU, Nysetvold has been director of Development and IT with Gjensidige NOR Spareforsikring. He has experience from various consultancies and held senior positions with Forenede and Gjensidige.

Frode J. Hansen (b. 1964)

Director of Sales-Corporate Clients. A graduate of the Norwegian School of Management, Hansen was previously director of Corporate Sales for Gjensidige NOR. He has also been a general manager with several banks.

Torbjörg Vanvik (b. 1961)

Director of Customer Service-Corporate Clients. A graduate of the Norwegian School of Management, Vanvik has held senior positions in accounting, financial management and sales, also with SINTEF.

Gunnar Gullaksen (b. 1962)

Director of Individual Clients. A graduate of the Norwegian School of Economics and Business Administration (NHH). Gullaksen was director of Individual Clients for the former Vital Forsikring. He has also been a consultant and broker and has held senior positions with DnB.

John Magnar Bøe (b. 1953)

Director of Customer Service - Individual Clients. Educated in marketing and market communication, also from the Institute of Marketing. Bøe has been director of Branded Products with Vital. He has also held senior positions in sales and market activities with Vital, and has been product and Market Director with DnB.

Kjerstin Fyllingen (b. 1958)

Director of Public Sector. A graduate of the Norwegian School of Management and a Master of Management. Formerly director of Customer Service - Individual Clients with Vital Forsikring and has held senior positions with DnB, Veritas and Infodoc International.

Tom Rathke (b. 1956)

Director of Finance. Rathke is an economics graduate from the Norwegian School of Management /Master of Business Administration from the University of Wisconsin and AMP from Harvard. Rathke has been managing director of Gjensidige NOR's investment fund company Avanse and has held senior positions with Vesta, If Skadeforsikring, Dyno and SAS.

Anders Skjævestad (b. 1966)

Director of Staff. Skjævestad is a state authorised public accountant from the Norwegian School of Economics and Business Administration (NHH). He was director of Staff for the previous Vital Forsikring and has experience from Arthur Andersen and PriceWaterhouse.

Kjell Sivertsen (b. 1962)

Director of IT. Sivertsen graduated in Master of Science, from the Norwegian University of Science and Technology (NTNU). He was director of IT for Gjensidige NOR Spareforsikring and has experience from various IT consultancies.

Bjørn Atle Haugen (b. 1963)

Director responsible for the Secretariat. Haugen is a state authorised public accountant from the Norwegian School of Economics and Business Administration (NHH). He was head of accounts and controller with Gjensidige NOR Spareforsikring and has experience from external auditing.

Thomas Skålnes (b. 1956)

Director of Communication. Cand. mag. graduate from the University of Bergen and the University of Oslo. Skålnes was director of Communication with the former Vital Forsikring, and other positions include that of senior adviser with Geelmuyden. Kiese, head of information services for Sparebanken Vest and editor of Gula Tidend.

"Anyone can polish shoes, but not everyone knows where the shoe pinches!"

Ragnvald, Vestfold Hovedgård

Speciality: Butler

There are only six professional butlers in Norway. To succeed, you need to be service-minded and have the right personality. You must be able to lead, as well as serve. You can train as a butler in England and the Netherlands.

Vital specialist in HES

Product group manager Kjell Nedregård works with HES. Vital is the only company that can provide products, services and specialists in the area of Health, Environment and Safety (HES). The focus is on health and the significance of the working environment for the risk of disability, and preventive measures and rehabilitation. An HES section which understands where the shoe pinches can provide the customer with added value in the form of healthy, motivated personnel and lower costs through less sick leave.

Organisation

The organisational form provides integrated control of Vital Forsikring ASA and its associated company Vital Link AS, which together comprise the life insurance and pension activities of the DnB NOR Group.

Vital is organised as three business areas: Corporate Clients, Public Sector and Individual Market.

There is a separate unit - Corporate Sales - for sales to corporate clients, while sales to individual and public sector clients are handled by the respective business areas. There are two units for customer service - one for corporate clients and one for individual clients. Customer service for public sector clients is handled as an integrated part of the Public Sector business area

The managing director has overall responsibility for Vital Forsikring ASA and its subsidiaries, and as a group director of DnB NOR he is responsible for the life insurance activities of the Group.

Sales - Corporate Clients is responsible for advisory services and sales to major clients and through brokers.

Corporate Market is responsible for market and product results in the corporate market.

Customer Service - Corporate Clients is responsible for ongoing customer service related to the establishment, transfer, amendment and settlement of corporate insurance agreements.

Individual Market is responsible for advisory services and sales, and for market and product results in the individual market.

Customer Service - Individual Clients is responsible for ongoing customer service related to the establishment, transfer, amendment and settlement of insurance agreements in the individual market.

Public Sector has overall responsibility for public sector clients, including advisory services, sales and customer service, and for market and product results.

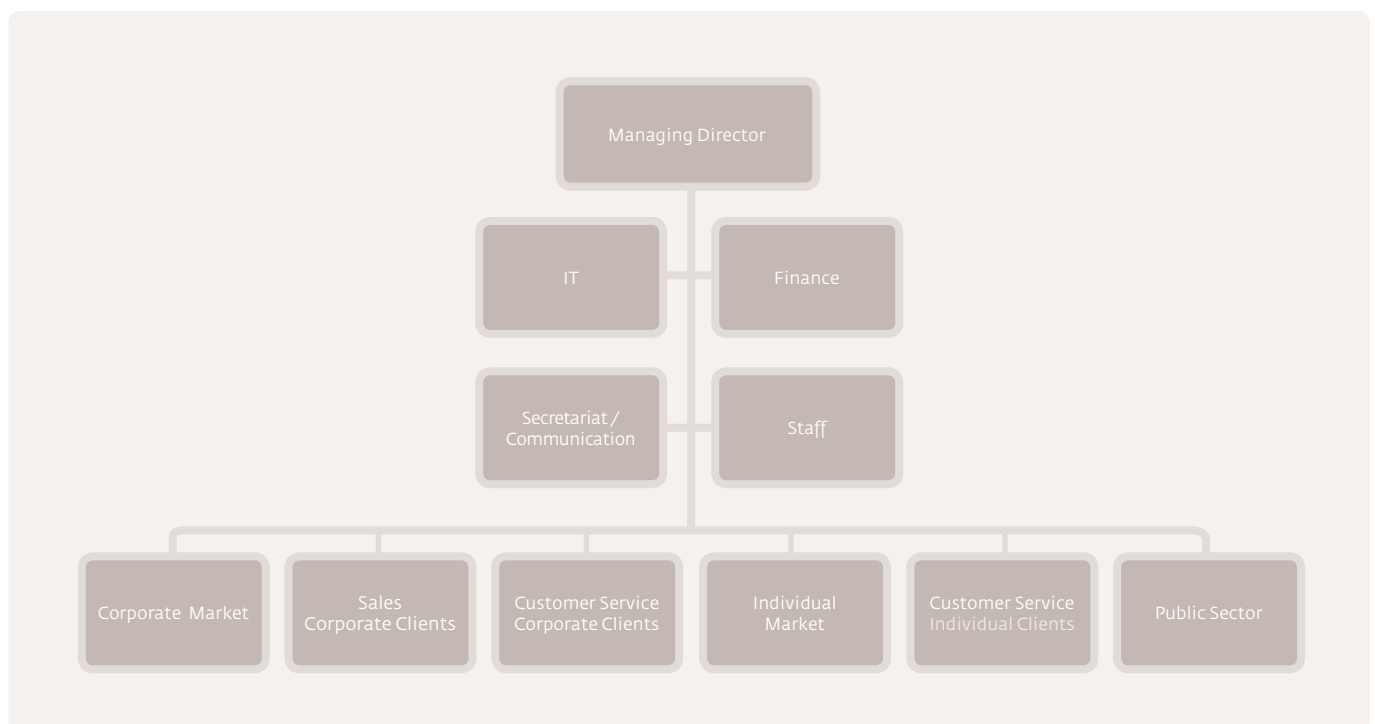

IT is responsible for activities in the area of information technology.

Staff is responsible strategy, management accounting and accounting, controller functions and actuarial functions.

Finance is responsible for asset management and monitoring of ethical guidelines governing investment of the company's funds.

The Secretariat is responsible for internal and external information, media contact, brand building, organisational development and sponsoring activities.

Communication is responsible for internal and external information, media contact, brand building, organisational development and sponsoring activities.

"The tuba is
not for me,
that's for sure..."

Ole Edvard, 11 years old

Speciality: Mouthpieces

Mouthpiece makers are seldom perfectionists. Even the experts admit that all mouthpieces are a compromise. They know that when that have found the right mouthpiece, the job has been done - the mouthpiece and the performer become one...

Vital specialist in risk assessment

The products offered by an insurance company have varying degrees of risk. Disability, mortality and financial risk illustrate the point. Actuary Øystein Sæter emphasises the importance of having reliable analyses for the various products offered by Vital: "Good analyses are an instrument which makes it easier to understand and explain difficult problems and relationships. The customer can see this from the clarity and credibility of Vital's communications".

Director's Report

Strong results from Vital in 2005

Vital is Norway's largest company in the area of pension saving and life insurance with total assets which passed NOK 200 billion in 2005. Vital recorded strong results, with a sound increase in premium income, new customers and profits for allocation to the policyholders and owner. The risk and administration results were also considerably improved in 2005.

Operations*

Vital is responsible for the life insurance and pension business of the DnB NOR Group and comprises Vital Forsikring ASA with subsidiaries and the associated company Vital Link AS. Vital Forsikring ASA and Vital Link AS will be merged when the merger terms are set, probably in the first half of 2006.

Vital is organised in market areas serving corporate, individual and public sector clients, as well as staff and support areas. Corporate clients account for around 50 per cent of total assets, while individual public sector clients make up 42 and 8 per cent, respectively.

Vital offers occupational pensions to corporate clients, both defined contribution-based and benefits-based schemes. At year-end 2005, benefits-based schemes made up 78 per cent of the total, and contribution-based schemes 22 per cent. The market trend is for new schemes to be contribution-based, but for the moment schemes of this kind account for a small but growing proportion of Vital's total assets.

In the course of 2005, Vital developed customer-friendly and cost-efficient solutions for obligatory occupational pension schemes. All Norwegian companies are required to establish an occupational pension scheme by the end of 2006. Vital offers schemes of this kind mainly in co-operation with other units of the DnB NOR Group and through its own agents.

Individual customers receive offers of long-term savings solutions through individual pension agreements and annuities, and in the form of capital products. The products are provided with a guaranteed rate of return or as unit-linked products which give the customers a choice of investment profile.

Local government and public enterprises are offered occupational pensions schemes established in line with national wage agreements.

The customers are served by Vital's sales representatives throughout Norway and the products are available through DnB NOR's distribution network, independent agents and the Internet.

Vital's financial assets comprise mainly investments in equities, short-term and long-term bonds, the money market and real estate. Most of the funds are invested in securities and are invested in the Norwegian and international capital markets. In the real estate sector, Vital invests in and rents out office buildings, shopping centres and hotels,

mainly in Norway but also in England and Sweden.

The process of integration and the extraction of synergies following the merger of Vital Forsikring and Gjensidige NOR Spareforsikring was completed in 2005 as planned. In the period 2004-2007 synergies of NOK 200 million will be realised and the workforce will be reduced by the equivalent of 150 full-time positions. In 2005, new synergies made it possible to reduce the workforce by 48, bringing the total reduction so far to 124 as a result of the merger. Total cost synergies at year-end 2005 came to NOK 115 million.

Important contributions to the extraction of synergies in 2005 were the establishment of a common IT system for customer data and the adjustment of the sales organisations, business areas and staff functions to take account of the new company's requirements. The remaining synergies will be extracted in pace with conversion to the establishment of common IT systems for the management of pension agreements. The accounts for 2004 included a provision to cover the costs of the ongoing restructuring process. Steps taken since the merger have already had considerable effects which have improved the administration result.

Vital will be offering personal insurance, mainly group life and occupational injury products, to certain segments of the corporate market from the autumn of 2006.

Strategy

Vital's strategy is to be the leader in the Norwegian pension market and to build on its position as a specialist in pensions and pension saving. The company's objective is to achieve growth and at the same time ensure that both the owner and customers receive a competitive return. Key elements of this strategy are the establishment of a cost-efficient and professionally unsurpassed organisation, while maintaining the highest standard of service and customer care. Vital shall also be perceived as an attractive point of entry to the DnB NOR Group.

Areas of special strategic importance in 2006 are compulsory occupational pensions, enhanced operational quality and growth in the public sector market, as well as higher sales and the development of customer relationships in the individual market. In order to achieve success in these areas, the priority will be on conversion of IT systems and a further focus on promoting a performance-minded culture as a foundation of Vital's operations.

Vital's strategic platform comprises the company's vision - "Vital makes the future simpler" -, its business concept - "Vital's function is to ensure that the customers have financial security and flexibility" - and its brand values which are summed up in the words Credible, Helpful and Sporty. The strategic platform sets out Vital's ambitious development objectives for the future and sets the standard for the

*The figures in brackets apply correspondingly to 2004.

way managers and staff are expected to conduct themselves. Vital's strategic platform is based on a corresponding platform for DnB NOR.

Vital shall have sound and efficient asset management procedures and reliable systems for measuring and controlling investment risk. Through its own expertise, and as part of the DnB NOR Group, the company will constantly seek to maximise the risk-adjusted rate of return and thus provide a stable long-term, competitive return. This will be reflected in the attractive return credited to policyholder's accounts.

Vital Forsikring complies with ethical guidelines (Socially Responsible Investment) in the management of its financial assets. Vital wishes to contribute to sustainable social development with a focus on the environment, ethics and social conditions. Vital shall be perceived as a company with high ethical standards.

Vital's ethical investment management has general criteria based on UN and EU guidelines. The company has also introduced specific criteria which exclude companies engaged in the production of tobacco or pornography, or which are involved in the production or distribution of components used in weapons of mass destruction. In 2005, Vital excluded investment in 35 companies based on these specific criteria, corresponding to around 2.5 per cent of the investment universe, as measured by the Morgan Stanley Composite Index (MSCI).

Customers and market position

Vital achieved sound growth in 2005, in both the group and the individual market.

There was a net inflow of transfers totalling NOK 1.2 billion, with a net inflow recorded in all business areas. The company also attracted many new customers as a result of the high level of new business in the individual market.

As 2005 ended, almost 500 000 people were members of Vital's group pension schemes, and more than 600 000 had an individual pension scheme. Considering that around 200 000 people were covered by both a group and an individual scheme, Vital was providing insurance for more than 900 000 people at year-end.

Vital's share of the market for managed customer funds increased throughout 2005. The overall figures for all products, including Unit Linked, show a market share of 34.9 per cent at 30 September 2005, against 34.7 per cent at 31 December 2004. It is also likely that the market shares increased further in the fourth quarter of 2005 in view of the good sales of individual pension products.

At 30 September 2005 Vital had 50 per cent of the market for individual pension products. At the same time, the market share of benefits-based pension schemes in the corporate had risen by 1.1 percentage point to 46.2 per cent, while the corresponding market share for contribution-based pension business showed an increase of 3.5 percentage points to 34.2 per cent. In the public sector market, the company's share of managed customer funds stood at 8.5 per cent,

reflecting a marginal decline since 31 December 2004.

During the year, Vital Link strengthened its position as Norway's leading company in the area of unit-linked products. At 30 September 2005 the company had 4.8 per cent of the market for managed customer funds, against 37.3 per cent 12 months earlier. (Source: Norwegian Financial Services Association).

Corporate market – increased interest in defined contribution based pensions

A number of corporate clients transferred their pension schemes to Vital in 2005 and the net inflow of pension fund assets from this source totalled NOK 0.7 billion. Close collaboration with other units of the DnB NOR Group made a positive contribution to the results.

There is increasing interest in defined contribution based pensions, also among large companies with benefits-based schemes. In 2005 Posten Norge AS chose Vital to cover its defined contribution based pension scheme. The agreement with Posten Norge AS is the largest of its kind to be established in Norway.

By the end of 2005, 1 606 companies had a defined contribution based pension scheme with Vital, up 52 per cent from 31 December 2004. These schemes had a total membership of around 47 000, reflecting an increase of 52 per cent in the course of the year. Pension fund assets related to these schemes totalled NOK 1 billion at year-end, an increase of 85 per cent from the start of the year.

Individual market – sales record

In 2005 Vital's sales of individual products were again at a record level, with overall sales 69 per cent higher at NOK 111.7 billion. The company's strong position in the individual market is partly due to its extensive distribution network, where DnB NOR is the largest channel of distribution.

New business premiums written by Vital through the DnB NOR sales channel totalled NOK 7 475 million (4 205), up 78 per cent on 2004. Of this, DnB NOR's sales of guaranteed insurance products accounted for NOK 6 551 million (2 937), a rise of 123 per cent, while sales of unit linked products were 27 per cent lower at NOK 925 million (1 268).

The sharp rise in products with a guaranteed return reflects the fact that the customers regard this as an attractive alternative to interest on bank deposits. Vital has chosen not to use this product to compete with bank deposits, as reflected in the minimum subscription amount and the establishment fee payable by the customer.

In 2005 Den norske Bank accounted for 64 per cent of Vital's sales in the individual market (62), while Vital Forsikring's own sales personnel made up 12 per cent (12) of the total. Independent agents and other channels of distribution accounted for 24 per cent (26).

Public sector market – more choosing Vital

Four local authorities transferred their pension business to Vital with effect from 1 January 2005, while a further two decided in the autumn

to make Vital their provider of pension services, with effect from 1 January 2006.

Vital is the market leader among the private life insurance companies operating in the public sector with a total of 57 municipal clients as well as a number of other public sector clients.

Accounts for 2005

The accounting profit for allocation totalled NOK 5 680 million (3 569). Of this, NOK 4 508 million (2333) is being allocated to the policyholders and NOK 1 172 million (1 236) to the owner and tax. Tax charged against profits is calculated at NOK 400 million. The profit after tax was NOK 1 572 million (1 300).

The securities adjustment reserve rose by NOK 1 966 million to NOK 5.5 billion and the accounts include an allocation of NOK 1.5 billion to additional allocations.

The accounts have been prepared on a going concern basis.

Premium income

Vital Forsikring and Vital Link had aggregate premium income of NOK 24 856 million (22 132), an increase of 12.3 per cent on the previous year.

Vital Forsikring had premium income of NOK 22 057 million (19 096), a rise of 15.5 per cent.

Premium income from group pension business totalled NOK 9 658 million (12 204), a decline of 21 per cent, with the corporate market accounting for NOK 8 041 million. The reduction was due to a lower level of net transfers. Premium income from the public sector fell by NOK 731 million due to changes in the renewal date for large contracts, as well as a reduction in net inflows.

Premium income from individual products with a guaranteed return amounted to NOK 12 208 million (6 454), an increase of 89 per cent on the previous year. Premium income from unit linked products, which for accounting purposes are posted by Vital Link, totalled NOK 2 799 million (3 036), 8 per cent down on 2004. The decrease was partly due to a great interest in saving with a guaranteed rate of return in 2005.

Annual premiums written and single premiums totalled NOK 19 348 million (14 173), an increase of 36.5 per cent. Aggregate annual premiums written and single premiums for Vital Forsikring and Vital Link amounted to NOK 21 512 million (16 421), up 31 per cent on the previous year.

The aggregate net inflow of transfers posted by Vital Forsikring and Vital Link in 2005 came to NOK 1 203 million, compared with NOK 3 671 million in 2004.

Management results

The return on book values and the value-adjusted return, excluding changes in unrealised capital gains on long-term securities, was 7.3 per cent and 8.3 per cent (6.5 and 7.1), respectively. Including

changes in unrealised capital gains on long-term securities the return was 7.7 per cent (7.7).

Over time, Vital has adjusted its investment portfolio to take account of the continued low level of interest rates. Around 40 per cent of the portfolio consists of real estate and long-term bonds which contributes to an even and stable return. The good results that have been achieved for both customers and our owner are largely due to long-term investments made when interest rates were substantially higher than they are at present.

Net financial income, after changes in the securities adjustment reserve, totalled NOK 11 909 million (9 816). Norwegian equities were the asset class which provided that highest return at 42.51 per cent (38.1), which was 0.1 percentage points better than the Oslo Stock Exchange Benchmark Index, excluding the DnB NOR share which Vital cannot invest in. Foreign equities showed a return of 22.3 per cent (4.3), which was 0.3 percentage points below the benchmark index (Morgan Stanley).

The bond portfolio provided an overall yield of 3.5 per cent (5.5), which was 0.2 percentage points more than the reference index. Norwegian bonds showed a yield of 3.8 per cent (6.7), and foreign bonds 3.4 per cent (6.3). The return on money market investments stood at 2.2 per cent (2.3), while long-term bonds, excluding changes in unrealised gains, showed a book yield of 5.7 per cent (5.7).

Real estate provided a return of 13.6 per cent (8.7). Properties are required to be assessed at fair market value, in line with guidelines from the Financial Supervisory Authority of Norway. As a result, the real estate portfolio was written up by 2.6 per cent at year-end 2005 because of higher rental income and a lower vacancy rate, and by 3.2 per cent due to the lower required rate of return.

The return on investment outperformed the reference index in all areas, except in relation to international bonds.

Insurance payments

Insurance payments totalled NOK 10 100 million (10 661), the decline being due to fewer transfer outflows to other insurance companies. Payments to policyholders amounted to NOK 8 611 million (7 536).

Operating expenses

Operating expenses, including financial management costs, totalled NOK 1 432 million (1 343). The 6.6 per cent increase in operating expenses was mainly due to an increase in commissions to distributors as a result of higher sales as well as higher asset management costs. Total operating expenses corresponded to 0.90 per cent (0.93) of average policyholders' funds. Synergy benefits from the integration of activities is contributing to reduce costs.

Results

The interest result, before transfers to additional allocations, stood at NOK 6 053 million (4 137). The aggregate risk result was a profit of NOK 94 million (-312), show-

ing an improvement of NOK 997 million since 2003.

The administration result was a loss of NOK 83 million (- 137), reflecting an improvement of NOK 108 million since 2003. In relation to corporate clients, the administration result was a loss of NOK 12 million (- 29) and Vital's goal is to have a positive administration result in 2007.

In connection with the introduction of a new accounting standard (International Financial Reporting Standards – IFRS) the accounting practice for recording pension commitments has been changed. The difference between the accounting figure for commitments and the calculated actual commitment is posted as a cost in the profit and loss account. The owner's profit before tax has been reduced by NOK 150 million, corresponding to 35 per cent, in order to achieve a fair division of the cost between the policyholders and the owner.

Further information about these items appears in note 11.

Balance sheet

At 31 December 2005, Vital Forsikring and Vital Link had aggregate total assets of NOK 201 661 million (175 145), an increase of 15.1 per cent. At the same time, Vital Forsikring had total assets of NOK 187 968 million (164 991), a rise of 13.9 per cent, while Vital Link had total assets of NOK 13 694 million (10 154), reflecting growth of 34.9 per cent.

Unrealised gains on long-term bonds, which totalled NOK 3 268 million (3 935) at year-end, are not recorded in the figure for total assets in the balance sheet.

Vital Forsikring's consist of the following items: short-term bonds 17.9 per cent (18.1), shareholdings 23.3 per cent (16.6), long-term bonds 27.3 per cent (32.8), money market investments 16.8 per cent (17.2), real estate 12.2 per cent (11.8) and other items 2.5 per cent (3.5). The breakdown of total assets includes derivatives.

Customer funds invested by Vital Link in unit-linked insurance products are distributed as follows: shareholdings 54 per cent (45), balanced, bond and money market funds 35 per cent (39), and bank deposits 11 per cent (16).

Buffer capital

Buffer capital protects the policyholders' premium reserve and may consist of the securities adjustment reserve, unrealised gains on long-term securities, additional allocations, equity, subordinated loan capital and the security reserve. All of these elements, except for parts of the security reserve, may be used to cover the guaranteed rate of return on policyholders' funds. Nevertheless, the various components of buffer capital can only be used in accordance with the different conditions and time horizons that apply to each component. The composition of buffer capital is thus of importance in assessing the company's risk situation.

At 31 December 2005 buffer capital totalled NOK 22 415 (19 630), the increase being due to good financial results in 2005. Vital Forsikring's capital base is sufficient to bear investment risk and withstand fluctua-

tions in the financial markets.

The breakdown and development of buffer capital in 2005 was as follows:

NOK million	31.12.2004	31.12.2005
Kursreguleringsfond	3 538	5 503
Securities adjustment reserve	3 538	5 503
Unrealised gains on long-term securities	3 935	3 268
Additional allocations	2 357	3 788
Equity	7 155	7 155
Subordinated loan capital / Capital loans	2 449	2 499
Security reserve	197	201
Total	19 630	22 415

The main changes in 2005 were an increase of NOK 1 431 million in additional allocations, strengthening of the securities reserve by NOK 1 966 million and a reduction of NOK 667 million in unrealised gains on long-term securities.

Strengthening of securities adjustment reserve and the additional allocations enable the company to maintain the composition of assets at a competitive level.

Buffer capital - equity in excess of the statutory minimum capital ratio of 8 per cent, including additional allocations and the securities adjustment reserve - amounted to NOK 11 564 million (8 577) at 31 December 2005.

The risk attached to the return on the investment portfolio depends largely on the composition of assets. Vital's aim is to achieve a competitive return over time and to be in a position to take the necessary risk. This calls for sufficient buffer capital to absorb fluctuations in the financial markets.

The Board has set a risk level which is continuously monitored through management models, operative rules and reporting requirements. Through reports, the investment risk is monitored, controlled and assessed in the light of the available buffer capital. Alternative courses of action are continuously assessed, and the necessary action taken. There are also controls to ensure compliance with statutory investment limits and capital adequacy and solvency requirements. There is an ongoing process aimed at the development of tools and systems to give an enhanced overview and better control of the risk attached to asset management services.

Capital ratio

The capital ratio is qualifying capital for capital adequacy purposes expressed as a percentage of the risk-weighted asset base. At 31 December 2005, Vital Forsikring's qualifying capital totalled NOK 9 312 million (8 953) and the capital ratio was 11.7 per cent (14.1).

Solvency margin capital consists of the capital base plus 50 per cent of additional allocations and 55 per cent of the security reserve in excess of the minimum requirement. At year-end 2005, Vital Forsikring's sol-

vency margin capital amounted to NOK 11 296 million (10 238). During the year, the solvency margin requirement rose to NOK 7 130 million (6 289).

Personnel

For Vital it is important to attract and retain skilled personnel.

In the process of integrating the two merged companies it has been important to give priority to customers and daily operations. Vital's personnel have shown a sound ability to tackle the challenges presented by both integration and growth and have made a significant contribution to the company's success.

Including subsidiaries, Vital Forsikring had a workforce of 919 (931) in permanent employment at year-end, corresponding to 881 (898) full-time positions. Women made up 49 per cent of the workforce and men 51 per cent. The average age was 44.9 years and the average period of service 14.5 years.

Vital's employees' also benefit from the schemes that have been set up by the DnB NOR Group. An important form of long-term motivation is the allocation of shares in DnB-ansattes Fond AS.

Reference is also made to the organisation chart on page 19.

Working environment

The incidence of sick leave in 2005 stood at 4.6 per cent (4.8). No serious injuries or accidents were reported in 2005.

The Working Environment Committee is focused on reducing the level of sick leave and active steps are taken to this end. One such activity is the HES project "Vital Working Environment" which has been shown to be effective in improving the working environment, with a reduction in sick leave in those areas where the project has been implemented.

Vital's Rehabilitation Committee has been in direct contact with personnel who have been on sick leave for a prolonged period. Their cases are monitored directly and several employees have returned to work in suitably adjusted working conditions.

Vital Forsikring has a high level of activity related to health, the environment and safety (HES). HES activities are now reported in line with other internal control activities.

Vital is an Inclusive Working Environment Company and is certified as an Environmental Lighthouse Company.

The management have regular meetings with employees who are members of the Confederation of Insurance Employees.

The company's activities do not pollute the external environment.

Equality

Vital Forsikring's workforce is split virtually equally between men and women. However, among the 118 (113) part-time employees women make up 86.4 per cent (84.1). The number of male managers within the organisation with personnel responsibility totals 79 (72), against 26 (23) women. These factors contribute to the fact that female employees have a lower average salary than men.

Vital seeks to increase the number of women in leading positions, partly through increased female representation on management development programmes. The company maintains an overview of women with managerial talent and female managers with the potential to take up senior positions within the DnB NOR Group.

Vital still has some way to go before it has achieved the desired balance between men and women at management level. Through the DnB NOR Group, Vital will be pursuing an active policy, based on initiatives and analyses, to increase the number of women in management positions. This will provide a basis for considering specific initiatives.

Outlook

Vital expects to see further growth in the market for pension saving in the coming years, in both the corporate and individual markets. Based on its own organisation and by taking full advantage of the strength of the DnB NOR Group's distribution network, Vital will be well placed to further strengthen its position in the marketplace.

It is expected that compulsory occupational pension schemes will correspond to a market worth up to three billion kroner in annual premiums. Vital intends to establish a leading position in this market.

The Pension Reform contributed to general interest in pensions in the market. An expected increase in disposable incomes is also likely to contribute to an increased level of private pension saving in the coming years.

New life insurance legislation is expected to be largely implemented from 2008. The regulations will mean modernisation of the industry, with positive effects for both customers and owners. For shareholders, the new legislation will mean increased scope to determine the risk

Utvikling i antall årsverk

and thus increase the return on risk-adjusted capital. The customers will have greater scope to determine the investment profile and a more transparent price structure to relate to. Vital has taken the necessary steps to prepare for the changes in the regulatory framework.

At 31 December 2005 the premium reserve provided an average interest rate guarantee of 3.75 per cent, against 3.81 per cent a year earlier. The reduction reflects the fact that the guaranteed return on premiums paid in under group pension schemes was reduced from 4 to 3 per cent effective from 1 January 2004. The lower interest rate was also affected by a considerable level of new business in the individual market where the guaranteed return stands at 3 per cent. The maximum guaranteed rate for new business established after 1 January 2006 is 2.75 per cent. The average guaranteed return is expected to continue falling by 0.04 – 0.06 percentage points annually over the next few years.

Higher longevity and changes in the pattern of marital status have led to changes in the margins for retirement pension and spouse's pension. While spouse's pension and children's pension provided profits of NOK 629 million in 2005, retirement pension showed a loss of NOK 509 million. Vital is planning to change its tariffs for group spouse and retirement pension in 2007. This will bring the results more into balance. The tariff changes being made by Vital for retirement and survivor's pension are being co-ordinated with being made by the rest of the industry.

Vital has established solid buffers to withstand fluctuations in the financial markets, and its asset management activities are based on a long-term perspective, since experience shows that this provides the best return over time. Vital is prepared for a market characterised

by low interest rates in the period ahead, with around 40 per cent of balance sheet investments comprising long-term bonds and real estate which give a good return. The sound financial buffers present scope for increasing the level of exposure in areas with a higher expected rate of return.

The insurance industry expects new solvency requirements, referred to as "Solvency II" and harmonising with EU regulations, with implementation at the earliest from 2010. In December the Financial Supervisory Authority of Norway published "Proposed temporary capital requirements for Norwegian insurance companies in the period 2007 – 2009". This spring the Ministry of Finance is expected start on the process of determining the capital requirements that are to apply to the insurance companies in the period prior to the implementation of Solvency II. Vital does not envisage any major changes in the short term and is positive to the harmonisation of regulations within the EU.

The Board is very satisfied with Vital's results in 2005 - the financial return, the trend in premium income, the net inflow of transfers and, not least, the administration and risk result. Along with the good results, the process of integration has been implemented as planned. All in all, Vital is well placed to advance further, and this is to a great extent thanks to the untiring efforts of the staff. The Board takes the opportunity to thank them all for their sound contribution in 2005.

Dividend and allocations

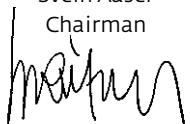

The Board of Directors of Vital Forsikring ASA proposes a dividend of NOK 3 030 million. Vital Forsikring ASA will receive a group contribution of NOK 1 458 million after tax, and the accounts include a provision for dividends consisting of this amount and the profit for the year, NOK 1 572 million.

Accounting principles

General

The accounts for Vital Forsikring ASA have been prepared in accordance with Norwegian regulations governing the annual accounts etc. of insurance companies, Norwegian accounting legislation and in conformity with generally accepted accounting principles and regulations issued by the Financial Supervisory Authority of Norway.

Consolidation

Vital Forsikring ASA (Vital) is the parent company of the Vital Forsikring ASA Group which includes companies in which the parent company directly or indirectly owns more than 50% of the share capital, and where the ownership is of a permanent nature and gives a decisive influence on the company's operations. The subsidiaries are valued on the basis of the equity method, apart from properties organised as limited companies, limited partnerships and general partnerships which are classified and posted in the profit and loss account as directly owned properties.

The companies are listed in notes 13 and 14.

The accounts for 2005 represent both the accounts of the parent company, Vital Forsikring ASA, and the consolidated accounts. This is because the subsidiaries in the accounts of Vital Forsikring ASA are incorporated applying the equity method. Because of the size and the nature of the activities of the subsidiaries, the consolidated accounts therefore do not differ substantially from the accounts of the parent company.

Classification and valuation

Intangible assets

Goodwill - Goodwill arising from previous acquisitions and mergers is capitalised and amortised on a straight line basis over its expected economic lifetime. In connection with each interim report, an assessment is made to determine whether there is any objective evidence of a decline in value, and in such case a write-down test is carried out. In any event, there is an annual calculation to determine whether the value of goodwill is still considered to exist.

IT systems and software - Software purchased is capitalised at acquisition cost, including outlays involved in preparing it for use. Directly identifiable costs related to software developed by the company itself are capitalised and included under intangible assets. This assumes that the systems are controlled by the company, that the likely economic benefits exceed the development costs, and that the expected lifetimes is more than three years.

Direct costs includes employees directly involved in software development, material costs and a proportion of the relevant fixed overheads. Costs related to the maintenance of software and IT systems are charged in the profit and loss account as they arise.

IT systems and software posted in the balance sheet are depreciated on a straight line basis over their expected economic lifetime, and are written down if the value of the expected economic benefits is lower than the balance sheet value.

Buildings and other real estate

Investments in buildings and other real estate are divided between directly owned properties and indirectly owned properties organised as legal entities (limited companies, general partnerships and limited partnerships). Indirectly owned properties are classified and valued in the same way as directly owned properties.

Buildings and other real estate are stated at fair market value at year-end. In-house expertise is used and value assessments are based on the discounted value of future rental income. External value assessments are used for some properties. Properties located abroad are stated at fair market value in local currency, and in translation into Norwegian kroner the exchange rate in force at year-end is used.

For the year as a whole, the change in market value and realised gains/losses on property sales are posted as ordinary financial income/expenses in the profit and loss account. The same applies to changes in market value due to changes in the exchange rate for properties located abroad.

In accordance with the regulations for the annual accounts of insurance companies, there is no ordinary depreciation on buildings and other real estate posted at fair market value.

The company uses forward contracts to hedge its foreign properties against changes in exchange rates. The contracts are valued at fair market value and the accrued interest and any change in the unrealised value of the derivative due to a change in the current exchange rate, is posted in the profit and loss account as it arises. Any change in the unrealised value of the derivative due to a change in interest rates is credited/debited to the securities adjustment reserve and is therefore not included in the profit for allocation. |

Short-term financial assets

Financial assets defined as shares, bonds, commercial paper and financial derivatives are valued at their aggregate market value at 31 December. The net unrealised change in the market value is credited/debited to the securities adjustment reserve in the balance sheet.

Equities and investments - Equities with a stock exchange listing, or listed in another regulated marketplace, are valued at the official closing price on the last day of trading prior to year-end. Other equities and investments are valued at the expected market price based on available information at year-end.

Bonds and other securities with a fixed return - Bonds and other securities with a fixed return with a stock exchange listing, or listed in another regulated marketplace, are valued at the official closing price on the last day of trading prior to year-end. Where there is no known traded price for bonds and other securities, the market value is based on the interest rate curve in the respective markets, adjusted for the individual issuer's credit risk.

Foreign currency

Holdings of foreign securities, financial instruments and liquid assets denominated in foreign currency are translated at the year-end exchange rate.

Financial derivatives

All trading with financial derivatives takes place within defined frameworks and is used to hedge other balance sheet items. The instruments are classified as trading transactions and are used to manage the company's share, interest rate and foreign currency exposure.

Financial derivatives are stated at market value based on observed market values of financial derivatives, where this is available. Financial derivatives that are not traded in a liquid market are stated at the estimated market value based on mathematical models that are generally accepted for pricing of financial derivatives of this kind.

Options - Options are used for shares, bonds, futures, forward rate agreements, interest rate agreements, interest rate swaps and foreign currency. The option premium is posted in the balance sheet when the agreement is made and is posted in the profit and loss account when the option either expires or is exercised. The market value is used for calculation purposes and accounting entries.

Interest rate futures - Interest rate futures are posted on the profit and loss account on an ongoing basis.

Interest rate swaps and Asset swaps - Contract values are calculated at year-end. Interest earned/accrued is posted on an ongoing basis.

Foreign exchange contracts - Foreign exchange contracts are used mainly to hedge the foreign currency exposure related to securities and other financial instruments.

Forward rate agreements - The portfolio value of forward rate agreements is calculated at year-end and is included in the valuation of the overall securities portfolio. Settlement and profit and loss account entries take place on the settlement date.

Bonds to be held until maturity

Bonds to be held until maturity are classified as long-term financial assets. They are stated at acquisition cost, plus/less any premium or discount at the time of purchase. The premium/discount is apportioned on a straight-line basis over the residual period of maturity. Bonds in foreign currency which are to be held until maturity are booked at amortised cost at year-end, using the year-end exchange rate for conversion into Norwegian kroner. Any change in book value due to a change in the currency exchange rate is posted in the profit and loss account on an ongoing basis.

Bonds in foreign currency which are to be held until maturity are hedged against changes in exchange rates by forward foreign exchange contracts. These contracts are stated at fair market value, and the accrued interest and any change in the unrealised value of the derivative due to a change in the current exchange rate is posted in the balance sheet on an ongoing basis. Any change in the unrealised value of the derivative due to a change in interest rates is credited/debited to the securities adjustment reserve and is therefore not included in the profit for allocation.

Fixed assets

Fixed assets for own use are classified as "Other assets" in the balance sheet. Fixed assets are depreciated on a straight-line basis on the basis of their expected economic lifetime. Properties used by the company itself are not classified as fixed assets but as investment properties and therefore not depreciated.

Subordinated loan capital - Subordinated loan capital denominated in foreign currency is re-stated in Norwegian kroner at the year-end exchange rate. Both realised and unrealised foreign exchange gains or losses are posted under "Financial income/expenses" in the profit and loss account. Interest payable on subordinated loans is posted under "Other expenses" in the non-technical accounts.

Securities adjustment reserve - The securities adjustment reserve consists of net unrealised gains on short-term financial assets according to the portfolio principle, in conformity with section 3-17 of the regulations for annual accounts. The reserve has a zero balance if there is a net unrealised loss.

Unrealised foreign exchange gains and losses on derivatives used to hedge real estate and bonds to be held until maturity denominated in foreign currency are not included in the securities adjustment reserve.

Insurance reserves

Vital's insurance reserves consist of the insurance fund and the security reserve. The insurance fund includes the premium reserve, additional allocations, the premium and pension adjustment fund, the claims reserve and other technical reserves.

Premium reserve: The premium reserve is a necessary reserve to secure future insurance commitments to the policyholders and the insured. The premium reserve is calculated as the cash value of the company's total insurance commitments, including costs, less the cash value of agreed future premiums. As a general rule, the premium reserve is calculated applying the same assumptions as those used to calculate the premium for the individual insurance agreements, i.e. the same mortality and disability assumptions, interest rate and cost tariffs.

Additional allocations: Additional allocations are a conditional allocation to policyholders where the change for the year is posted in the profit and loss account and therefore affect the profit for allocation. The Financial Supervisory Authority of Norway has set the maximum additional allocation per contract. Additional allocations may be applied when the return for the year is less than the guaranteed rate of return.

Premium and pension adjustment fund: The premium fund consists of prepaid premiums from policyholders under individual and group pension insurance. The pension adjustment fund consists of payments made by policyholders under group pension insurance. The fund may be used to provide supplementary pensions in connection with the regulation of future pension levels.

Claims reserve: The claims reserve consists of unsettled or uncompleted insurance settlements.

Security reserve: Allocations to the security reserve are statutory allocations in order to meet unexpected losses from insurance activities. They are posted in the accounts as statutory allocations.

Recording of income and expenses

Insurance premiums and insurance payments are entered as income/expenses with the amount that falls due in the year. Accrual of premiums earned is accounted for in provisions allocated to the premium reserve in the insurance fund. Income/expenses on the transfer of insurance contracts are recorded at the time the risk is transferred. Transfers to/from the company at year-end are entered in the accounts at 1 Jan. in the new year. Inflows of additional allocations are posted in the accounts under "Change in insurance reserves".

Realised losses/gains on the sale of securities are calculated by applying the FIFO principle ("First in, first out"). Dividends receivable are taken to income when the dividend payment has been approved by the general meeting.

Tax

The tax charge for the year in the profit and loss account consists of the tax payable and the change in deferred tax. The deferred tax is calculated on the basis of differences between the results for tax and accounting purposes that can be offset in the future. The values used are based on balance sheet and tax positions at year-end. The main timing differences consist of the previously accumulated change in the value of buildings, and the tax loss carried forward.

Taxable and non-taxable timing differences which are expected to be reversed in the same period are set off against each other and posted net. Net deferred tax assets are posted in the balance sheet if it is likely that they will be set against future taxable income. An overview appears in note 10.

Pension costs and pension commitments

The company is part of the listed DnB NOR Group and this year it has chosen to apply Norwegian Accounting Standard (NRS) 6A which give scope for applying IAS 19 as an alternative to NRS 6. Clause 3 of the standard makes it possible to set at zero the unamortised estimated divergence on the transition to IFRS, but in a letter dated 9 December the Financial Supervisory Authority of Norway has stated that this value can only be set at zero by posting the unamortised estimated divergence at 1 January 2004 in the company's accounts.

Pension costs are included in "Insurance-related pension costs". The basis for calculating pension costs is a linear distribution of pension entitlements measured against estimated accumulated commitments at the time of retirement. Costs are calculated on the basis of pension entitlements earned during the year with the deduction of the return on funds assigned to cover pensions. When the aggregate pension fund assets exceed the estimated pension commitments at year-end, the net value is classified as an asset in the balance sheet if it is likely that this overfunding can be used to cover future commitments. When the pension commitments exceed the pension fund assets, the net commitment is classified as a liability in the balance sheet. Each scheme is evaluated separately.

The calculation of pension costs and pension commitments is based on actuarial assumptions about life expectancy, salary rises, other changes concerning those entitled to a pension, and economic assumptions. The assumptions relating to the discount rate are set on the basis of the 10-year government bond rate at year-end, with a supplement to take account of the fact that the commitments have a maturity approaching 30 years. The pension costs are based on assumptions at the start of the period.

These assumptions must be expected to change over time. The economic consequences of changes in pension plans are posted in the profit and loss account when the plan is changed, unless the rights under the new pension plan require the employee to remain in service for a specified period (period of service).

Estimate divergences arising after 1 January 2004 as assessed against the higher of the total pension commitments and the total pension fund assets at the start of the accounting year. If the overall estimate divergence is more than 10 per cent of the higher of these two values, the estimate divergence in excess is posted in the accounts over the average remaining period of service.

Financial audit fee	2 120	1 150
Of which to the external auditor	444	500
Of which for the Group audit	1 676	650

The fee to the external auditor is divided as follows:

	2005	2004
Statutory audit	420	434
Taxation advice	24	66

Note 9 - Pension commitments

Vital has a tax-deductible occupational pension scheme for its own employees. The full retirement pension amounts to approximately 70% of the pension base, depending on the number of years of service. At 31 December 2005, 842 persons were members of the scheme. The company also has pension commitments to certain employees and employee groups not covered by the ordinary occupational pension scheme. This relates to employee groups with a lower retirement age, employees with a salary in excess of 12 times the National Insurance Fund base rate, and pensions for Board members. In total, these commitments relate to 72 persons.

The company is entitled to amend the occupational pension scheme. For accounting purposes, all the pension schemes are dealt with in accordance with the Norwegian Accounting Standard 6A, "Application of IAS 19 as provided for under Norwegian accounting law". In a letter in December the Financial Supervisory Authority of Norway made it possible for life com-

panies which are part of a listed company to apply Norwegian Accounting Standard 6A, clause 3, in the company accounts. However, violation of the principle of congruency was not permitted, and the life companies therefore had to enter in the profit and loss account the entire unamortised divergence as at 01 January 2004 on implementation.

With effect from 01 July 2005 the company's scheme was changed so that the right to a paid-up policy on the termination of employment is only linked to the retirement pension. In this connection, the employees have had their accrued rights under paid-up policies linked up to disability pension and survivor's pension. Accordingly, the disability and survivor's pension for the employees and the survivor's pension for those who have reached retirement age relates to the risk cover with no capital accumulation. As a result, the company's pension commitments have been substantially reduced. The annual premium for risk cover is included in pension costs.

Economic assumptions

	Costs		Commitments	
	2005	2004	31 December 2005	31 December 2004
Discount rate	4.7 %	6.0 %	3.9 %	4.7 %
Anticipated return on pension fund assets	5.7 %	7.0 %	4.9 %	5.7 %
Anticipated annual rise in salaries	3.5 %	3.5 %	3.5 %	3.5 %
Anticipated annual increase in the National Insurance Fund base rate	3.0 %	3.0 %	3.0 %	3.0 %
Anticipated rise in pensions	2.5 %	3.0 %	2.5 %	2.5 %
CPA acceptance rate	40	40	40	40

"The assumption related to the discount rate is based on the 10-year government bond rate at year-end, plus a supplement to reflect the fact that the commitments run for more than ten years. This supplement is the interest rate difference between 10-year and 30-year government bonds in the international market. The anticipated return on pension fund assets is based on how the funds are invested

and the historical return. The average return on the pension fund assets has been historically higher than the risk-free rate of return as part of these assets are normally invested in securities with a slightly higher risk than government bonds. The expected long-term higher return on the pension fund assets is estimated at one percentage point above the risk-free rate of return.

Directly owned properties	14 512
Properties owned by subsidiary limited companies	6 765
Properties owned by subsidiary general/limited partnerships	1 595

Market values at year-end 2005 have been calculated in accordance with section 3-14 of the regulations for the annual accounts of insurance companies.

The change in the real estate portfolio relates to the purchase of properties in Stockholm (Kista Galleria) and Oslo (Sannergaten 2, Essendropstgt 3, Kirkegaten 24-26), the sale of flats and outlays on existing properties. In accordance with the regulations for the annual accounts of insurance companies all properties at 31.12.05 have been written up/down to market value.

Properties used by Vital Forsikring and its subsidiaries for office purposes with an aggregate area of 33 535 sq.m. make up 2.7% of the total area. The rental for these properties is set on market terms.

Purchase/sale of real estate 2001 - 2005	2005	2004	2003	2002	2001
- Bought	2 198	1 769	2 195	936	2 548
- Sold (sale price)	532	422	735	17	174

Additions/disposals and value regulation in last year

NOK million	2005	2004
Cost at 1 January	17 050	15 717
+ Additionst	2 789	1 769
- Disposals (at cost)	(293)	(448)
Anskaffelseskost pr. 31.12.	19 546	17 038
Acquisition cost at 31 December	46	28

Gain posted in the profit and loss account	693
Losses posted in the profit and loss account	(500)
Net gain	193

Bonds denominated in foreign currency are recorded at amortised cost at year-end and the book value in NOK is based on the current exchange rate. Changes in book value due to changes in the current exchange rate are posted in the profit and loss account on an ongoing basis. The company uses forward contracts to hedge the portfolio of hold-to-maturity bonds denominated in foreign currency.

The company uses forward contracts to hedge the portfolio of hold-to-maturity bonds denominated in foreign currency. The

forward contracts are stated at fair market value, and accrued interest on the contracts and any change in the unrealised value of the derivative due to changes in current rates are posted in the profit and loss account on an ongoing basis.

Changes in the unrealised value of a derivative, due to a change in the level of interest rates, are debited/credited to the securities adjustment reserve and are therefore not posted in the profit and loss account for allocation.

Note 17 - Bonds and commercial paper classified as current assets

NOK million	Nominal value	Acquisition cost	Market value
Government/government guaranteed	31 369	33 118	33 184

Of which listed securities			77 %

Duration

Norwegian bonds	3.68
Foreign bonds	5.43
Money market	0.44

Average effective yield

Norwegian bonds	2.33 %
Foreign bonds	3.75 %
Money market	2.47 %

For each interest rate security the effective yield is calculated on the basis of the market price. For each interest rate security with no market price the effective yield is calculated on the basis of the fixed interest period and the classification of each security as

regards its marketability and credit risk. The aggregate weighting to establish the average effective yield for the total portfolio uses the individual security's relative share of the total interest rate sensitivity as the weighting factor.

Note 18 - Quantification of financial derivatives

Financial derivatives are used to effectuate a market view /allocation through rapid and cost-efficient asset and market exposure. Financial derivatives can also be used in active risk management, including the reduction of interest and exchange rate exposure. Here, interest rate exposure is defined as the value

change that would result in an interest rate increase of 1 percentage point for all maturities. In respect of equity futures and equity index options the term cash equivalent value is normally used, which is the corresponding investment in direct investment in equities which the exposure in the option reflects.

Note 19 - Financial exposure

Share exposure in 2005

At the start of 2005, shareholdings accounted for 17 per cent of Vital's total exposure, as a proportion of total assets, including derivatives and hedge funds. During the year this figure was stable and at year-end it stood at 23 per cent, including derivatives and hedge funds.

Vital's share exposure is split between Norwegian and interna-

tional investments. The Norwegian portfolio consists mainly of stocks listed on the Oslo Stock Exchange, representing an overall risk corresponding to the Oslo Stock Exchange Benchmark Index. The international portfolio is mainly split between the different regions corresponding to the Morgan Stanley Developed World Index, with North America accounting for around 59 per cent, Europe 28 per cent and Asia 13 per cent.

TOTAL	42 294	(43 383)		(1 088)

The above table excludes hedging of the real estate portfolio in an amount corresponding to NOK 3 353 million. The real estate portfolio is not included in the asset items in the table.

Note 19 - Financial exposure – continued

Long-term portfolio

NOK million					
Currency	Asset items	Instalments	Net amount in currency	Net amount in NOK	
EUR	5 575	(5 147)	54	428	
USD	485	(469)	2	16	
JPY	(6)		(100)	(6)	
TOTAL	6 054	(5 616)		438	

Foreign currency exposure arises naturally when Vital invests parts of its securities portfolio in the international securities market, and when parts of the subordinated loan portfolio are denominated in foreign currency. Under Vital's current foreign currency hedging strategy the total foreign currency exposure is reduced to a minimum. The aggregate open position in foreign currency is shown by comparing the net amounts for the short-term and long-term portfolio with subordinated loans denominated in foreign currency. See note 25.

Liquidity exposure - Short-term bonds and commercial paper

Agreed residual maturity

NOK million					
Currency	Up to 1 year	1-5 years	Over 5 years	Total	
CAD	-	214.41	178.04	392.44

Vital Forsikring ASA merged with Gjensidige NOR Spareforsikring ASA on 9 March 2004. At the date of merger, both companies were wholly owned by DnB NOR Holding ASA and the merger was therefore implemented with accounting continuity and with accounting effect from 1 January 2004. At the same time, the share capital of Vital Forsikring ASA was increased from

NOK 673 million to NOK 1 227 million and NOK 1 116 million was transferred to the share premium reserve. At the same time, the number of shares was increased by 2 159 144 shares at nominal value. After the merger, the share capital consists of 49 096 108 shares, each with a nominal value of NOK 25.

Note 24 - Capital adequacy and solvency margin capital

The capital adequacy regulations regulate the relationship between the company's capital base and the investment exposure on the asset side of the balance sheet. Solvency margin capital is measured against the solvency margin requirement, where the requirement is linked to the company's insurance commitments on the liabilities side of the balance sheet. The solvency

margin requirements for Norwegian life insurance companies are regulated by the "Regulations for calculation of the solvency margin requirement and solvency margin capital as laid down by the Ministry of Finance on 19 May 1995, with subsequent amendments".

Note 25 - Subordinated loan capital

NOK million Issue date	Loan amount in currency	Loan amount in NOK	Interest 2005 NOK	Interest rate %	Maturity
October 2001	USD	70	474	24	Floating Perpetual
June 2002	NOK	350	350	13	Floating Perpetual
June 2001	NOK	300	300	12	Floating Perpetual
Total perpetual subordinated loan capital		1 124	49		
December 2003	NOK	300	300	10	Floating December 2013
March 2003	NOK	850	850	32	Floating March 2013
Total dated subordinated loan capital		1 150	42		
Total		2 274	91		

The subordinated loans denominated in foreign currency are part of the company's foreign exchange strategy and help to hedge financial investments in foreign currency. The accounts for 2005 include foreign currency losses totalling NOK 50 million on subordinated loans denominated in foreign currency. The corresponding figure in 2004 was a foreign currency gain of NOK 40 million.

No loans were repaid and no new loans were taken up in 2005.

All loans have been taken up within the group. At the borrower's option, the perpetual loans may be repaid after 10 years from the issue date. Repayment of subordinated loans before the agreed maturity date requires the permission of the Financial Supervisory Authority of Norway.

Vital also has a perpetual capital loan of NOK 225 million, taken up in 2002 which qualifies as part of the company's core capital. Interest expenses for this loan totalled NOK 12 million in 2005.

Total	2 461	844

Note 28 - Associated companies

Vital Forsikring ASA is wholly owned by DnB NOR ASA. DnB NOR Bank ASA is a sister of Vital Forsikring ASA with an agreement to sell insurance for Vital Forsikring. DnB NOR Bank's sales of individual insurance, including unit-linked products, represented 64 per cent of new business in this area, against 62 per cent in 2004.

Commissions paid by Vital Forsikring to DnB NOR Bank ASA totalled NOK 192 million, against NOK 107 million in 2004. At year-end, Vital Forsikring had accounts receivable from other companies of the group amounting to NOK 227 million, against NOK 156 million at the end of 2004. At the same time, accounts payable by Vital Forsikring to other group companies totalled NOK 1 037 million, against NOK 18 million at 31 December 2004.

Vital Forsikring has an agreement to provide insurance cover for its sister company Fondsforsikringselskapet Vital Link AS. Commissions received from the company totalled NOK 7 million.

Vital Forsikring has an asset management agreement with its sister company DnB NOR Kapitalforvaltning ASA which provided total fees of NOK 157 million in 2005.

NOK 2 274 million of the company's total subordinated loan capital has been provided by DnB NOR Bank ASA, as well as a capital loan of NOK 225 million.

Other companies of the DnB NOR ASA Group have pension schemes with Vital Forsikring, and estimated pension fund assets at 31 December 2005 amounted to NOK 7.2 billion.

Note 29 - Other liabilities and commitments

Vital is involved in certain lawsuits related to insurance settlements. None of the ongoing court cases represents significant amounts in relation to the company's financial position.

Vital has no rental or leasing agreements of significance. Nor does the company have any guarantee liability, and it has given no mortgage security.

“Sometimes you have to be early to be on time...”

Vegard, bell-ringer

Speciality: Bell-ringing

Vegar Sandholt was one of the first Norwegians to study the art of bell-ringing. He was awarded the title of “maître carillonneur” (master bell-ringer) following his degree exam concert, and he is the first Norwegian to graduate in this subject. Sandholt now works as a bell-ringer in Oslo City Hall, Uranienborg Church and Bærum Town Hall.

Vital specialist in COP

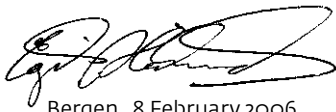

The name says it all. A Compulsory Occupational Pension is not something you can say “no thanks” to. Nor were they the words of market director Jørgen Nygård when he got the chance to work with COP. “This is the biggest reform in the history of the industry, and the biggest team effort in the history of the Group”, he says. In one year Vital will set up 4-5 times as many contracts as it has sold in the last 150 years. As Norway’s largest pension specialist, Vital has studied every aspect of COP since the statutory amendment was passed in October 2004. Sometime you have to be early to be on time.

Reports

Actuary's statement

The chief actuary shall ensure that the company's activity is at all times conducted in accordance with acceptable technical insurance standards. Accordingly, I have assessed the technical insurance situation for Vital Forsikring ASA in the course of the financial year and at 31 December 2004.

I have assessed the acceptability of the division of items pursuant to section 7-5 (division of expenses, losses, income and funds etc) and section 8-1 (surplus from life insurance activities) of the Insurance Activity Act. The allocations as described in section 8-2 (insurance fund), section 8-3 (change in the basic reserve for life insurance activities) and section 8-4 (security reserve for life insurance activities) have been checked. In my opinion the items described above are in conformity with prevailing legislation and regulations.

Bergen, 8 February 2006

Egil Heilund
Chief Actuary

Auditor's report for 2005

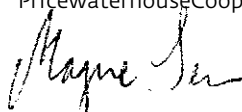

We have audited the annual financial statements of Vital Forsikring ASA for 2005 which show a profit for the year of NOK 1 572 million. We have also audited the information in the directors' report concerning the financial statements, the going concern assumption and the proposal for the appropriation of the profit for the year. The financial statements comprise the profit and loss account, the balance sheet, the statement of cash flows and the notes to the accounts. These financial statements are the responsibility of the Company's Board of Directors and the Chief Executive Officer. Our responsibility is to express an opinion on these financial statements and on other information according to the requirements of the Norwegian Act on Auditing and Auditors.

We have conducted our audit in accordance with the Norwegian Act on Auditing and Auditors and auditing standards and practices generally accepted in Norway. Those standards and practices require that we plan and perform the audit to obtain reasonable assurance that the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the information contained in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall content and presentation of the financial statements. To the extent required by law and auditing standards, an audit also comprises a review of the management of the Company's financial affairs and its accounting and internal control systems. We believe that our audit provides a reasonable basis for our opinion.

In our opinion,

- the financial statements have been prepared in accordance with the law and regulations and present the financial position of the company at 31 December 2005 and the results of its operations and its cash flows for the year then ended, in accordance with accounting standards, principles and practices generally accepted in Norway
- the company's management have fulfilled their obligation in respect of registration and documentation of accounting information as required by law and accounting standards, principles and practices generally accepted in Norway
- the information in the directors' report concerning the financial statements, the going concern assumption, and the proposal for the appropriation of the profit is consistent with the financial statements and complies with law and regulations.

Report of the control committee

To the Board of Representatives and the Annual General Meeting of Vital Forsikring ASA

The Control Committee has supervised the activities of Vital Forsikring ASA in accordance with statutory provisions and instructions laid down by the Board of Representatives.

In connection with the closing of accounts for 2005, the Control Committee has examined the annual report, the annual accounts, the Actuary's Statement and the Auditor's Report for Vital Forsikring ASA and the Group.

The Committee considers the Board of Directors' assessment of the company's financial position to be adequate and recommends that the submitted annual report and financial statements for 2005 be approved.

"It can't be done! 10 consecutive prime numbers in an arithmetic series!!!"

Albert, Mathematician

Speciality: Mathematics

Specialising in secondary equations and parabolas sounds like a nightmare, many would say. But for those working in this field the Norwegian Abel Prize is the ultimate award. It is said to be the most prestigious prize in mathematics.

Vital ITspecialist

It takes a lot of mathematics to work out pension points, rates of return and percentages. Through good internet portals directed at the customers our pension products become visible to the users. They also serve as a tool to help processing personnel provide a better, quicker and more credible service. Anna G. Nysetvold is a systems analyst. She develops IT services for Vital, and thinks that making new solutions is interesting and motivating, and contributes to a good working environment. She also thinks that Vital uses exciting technology which makes it possible to design very flexible and modern solution.

Embedded Value

The Embedded Value (EV) of Vital (Vital Forsikring and Fondsforsikringsselskapet Vital Link) has been calculated at 31 December 2005. The calculations have been audited by Deloitte. Analyses have also been made of the change in EV in the course of the year.

What is Embedded Value?

EV is a value assessment of a company based on the present value of future cash flows to the shareholders provided by the portfolio at year-end, in addition to the book value of equity. The cost of the capital tied up in the company at any time is deducted. The EV is published by a number of Norwegian and foreign life insurance companies.

Embedded Value of Vital

In calculating the EV for Vital, the traditional deterministic approach has been used. This means that the future development of Vital's customer portfolio is based on a model where the parameters remain constant throughout the entire period of calculation.

The financial parameters used to calculate Vital's Embedded Value are as follows:

	2004	2005
Discount rate:	8.5%	8.5%
Rate of return - Vital Forsikring	5.1%	5.1%
Rate of return - Vital Link	5.7%	5.9%
Tax rate	0%	16%
Annual salary growth	3.5%	4.0%
Annual growth in costs	3.5%	3.5%

Applying the above financial parameters and assumptions concerning transfers of insurance, mortality and disability, the future cash flow to the shareholders has been based on the existing customer portfolio. EV also includes equity, after deducting the cost of capital tied up in the company.

Embedded Value of Vital (NOK million):

	2003	2004	2005
Embedded Value 1.1*	10 093	10 504	13 681
Embedded Value at 1 January*	10 093	10 504	13 681
Model changes	+ 0	+ 24	+ 135
Return on EV	+ 849	+ 860	+ 1 079
Divergence from previous year's assumptions	+ 310	+ 586	+ 705
Changes in assumptions	- 134	+ 1 349	+ 285
Value of new business	+ 184	+ 358	+ 421
Embedded value before dividend at 31 December	11 302	13 681	16 304
Net dividend	- 770	0	- 1 547
Embedded value after dividend at 31 December	10 532	13 681	14 757

*The difference between the closing EV in 2003 and the opening EV in 2004 is due to a change in year-end appropriations for Vital Link for 2003.

The change in EV before dividend is an expression of value creation during the year which is called the EV result. The EV result for 2005 amounts to NOK 2 623

million, an increase from NOK 2 379 million in 2004. The increase in 2004 is due to several factors:

- The profit for 2005 was higher than had been expected in last year's EV calculation. This increased EV by NOK 705 million. The increase was mainly due to negative tax as a result of the exemption model for Norwegian life insurance companies, as well as a better return than expected.
- The expected increase in salaries and run-off assumptions in the area of group pensions has been changed from 2004. The overall effect amounted to NOK 200 million.
- The value of new business in 2005 for EV purposes was NOK 421 million.

New business

The sum of annual premiums plus one tenth of single premiums gives a measure of the premium level which is called APE (Annual Premium Equivalent). The following table shows the profit margin for new business in 2005 compared with previous years:

	2003	2004	2005
Value of new business	184	358	421
APE	1 364	1 712	2 058
Profit margin	13%	21%	20%

The value of new business was 18 per cent up on 2004 and was mainly attributable to good sales of individual life insurance.

Sensitivity analyses

Two main assumptions used in the analysis are the discount rate and the annual rate of return. By increasing the discount rate by 1 per cent to 9.5 per cent the EV is reduced by NOK 871 million. Conversely, a reduction in the discount rate to 7.5 per cent increases the EV by NOK 1 024 million.

If the future annual rate of return used in the model is increased by 1 per cent, this increases the EV by NOK 576 million, while a corresponding reduction reduced the EV by NOK 2 480 million. The reason for this asymmetry is that when the rate of return is low the owner cannot take out its share of the profit in line with the current model for the return on equity.

New legislation

The EV calculations are based on current legal provisions. New legislation will change the surplus model for traditional group pension insurance and also for new business in the area of individual life insurance. Under the new legislation, the division of profits is assumed to have the same margins as those used in the current model.

Value of guaranteed rate of return

In the analysis of EV for Vital, the company's risk exposure arising from the nature of the business is reflected in the discount rate. A high discount rate indicates means a high level of risk exposure. For pension and life insurance companies, part of the overall risk is linked to the guaranteed minimum rate of return which is credited to the policyholders each year. At 31 December 2005 the average guaranteed rate of return measured against the technical insurance reserves stood at 3.66 per cent. Compared with the previous year, this was a decline of 8 basis points. The guaranteed rate of return is part of the traditional products with profit sharing. In connection with the EV for 2005, the guarantee rate of return has been analysed and assessed. Calculations show that if the guaranteed rate of return is eliminated from the overall risk, this corresponds to a reduction of 2.3 per cent in the discount rate.

Definitions

Reference is also made to the statement of accounting principles.

Products

Group life insurance: Death risk insurance under which an employer or a professional association insures employees or members and, where agreed, their spouses and children. The insured amount is paid out on death. May also include the payment of a capital sum on disability in the event of permanent disability.

Debt insurance: Group life insurance which covers personal debt, and which the lender takes out for specific groups of personal borrowers.

Individual life insurance: Individual life insurance where the company pays out an agreed amount on the death of the assured or when a certain age is reached. May also include the payment of a capital sum on disability in the form of a single payment in the event of permanent disability.

Individual annuity and pension insurance: Individual insurance where the company makes monthly payments as long as a person lives, or until a certain age is reached. Normally comprises retirement pension, disability pension and pensions for a surviving spouse and dependent children.

Group pension insurance: The provisions of the Company Pension Act and the Defined Contribution Pension Act provide a new framework for tax-deductible private occupational pension schemes.

The company pension may comprise retirement pension, disability pension and pensions for spouses and dependent children. Defined contribution pension only relates to the retirement pension.

Group professional association insurance: Pension insurance taken out by an association for specific member groups.

Annuity: Insurance which provides continuous payments for an agreed period. Payments may start at once or from an agreed date. Annuities are subject to special tax regulations.

Unit linked: A life insurance product whereby the assured decides how his/her savings shall be spread over the investment alternatives provided.

Premiums and compensation

Single premium: The total cost of the insurance, payable as a lump sum.

Transfer of reserves: The transfer of premium reserves and additional allocations from/to other insurance companies or pension funds.

Compensation: The amount payable by the company under the insurance agreement when an insurance event arises.

Surrender: When the policyholder breaks the insurance contract and the surrender value is paid out.

Reinsurance: The transfer of a part of the risk to another insurance company.

Result and return on total assets

Administration result: The result arising from the difference between the actual operating expenses and the assumptions incorporated in the premium tariff.

Interest result: The result which arises when financial income differs from the assumptions incorporated in the premium tariff.

Risk result: The result which arises when mortality and disability during a period differ from the assumptions incorporated in the premium tariffs.

Average rate of return: The average rate of return is the average realised return on policyholders' funds during the year. Because of the way it is calculated, the average rate of return cannot be compared with the return from other financial institutions. The method of calculation is determined by the Financial Supervisory Authority of Norway.

The average rate of return is gross financial income less interest expenses, dividends paid, allocations to equity, taxes and statutory allocations to the security reserve expressed as a percentage of policyholders' average funds.

Guaranteed rate of return: The guaranteed rate of return is used to calculate the present value of future premiums, benefits and insurance allocations. The maximum guaranteed rate of return at any time is set by the Financial Supervisory Authority of Norway on the basis of the coupon rate for long-term Norwegian government bonds. With effect from 1 January 2006 the maximum rate of return for new contracts is 2.75%. For contracts signed before 1 January 2006 the maximum rate is generally between 3% and 4%.

Financial derivatives

Equity index futures: An equity index futures contract is an agreement to purchase or sell an index at a specific price on a specific date in the future. The contracts are standardised and listed on the stock exchange. Clearing takes place on a daily basis, with settlement of gains/losses based on changes in closing prices.

FX contracts: Foreign currency hedging transactions related to Vital's foreign investments. The contracts stated in the notes to the accounts relate to future sales of foreign currency in respect of the principal amount and any return on securities investments in foreign currency. This is done in order to reduce the foreign currency exposure and to stabilise the portfolio return.

Future rate agreement/Interest rate futures: An agreement stipulating a specific rate of interest for a future interest rate period. In the case of a purchase, the borrowing rate is stipulated, and in the case of a sale, the lending rate is stipulated. The principal - the amount upon which interest is payable - is not exchanged, and is stated for reference purposes in the agreement. Interest rate futures are best described as standardised and listed FRA agreements. The difference is that the difference between the agreement rate and the market rate is settled on a daily basis.

Interest rate swap: An agreement between two parties to exchange interest rates for a predetermined amount over a given period in the future.

Forward foreign exchange contracts: An agreement to buy/sell a foreign currency at a specific price for delivery on a specific date in the future. Contracts of this kind are normally of a short-term nature, i.e. from three months to a year. They are used mainly to hedge shares, bonds and other holdings denominated in foreign currencies.

Equity index options: An equity index option is a unilateral right to purchase or sell equities at a predetermined price. The options are linked to equity indexes.

Capital adequacy and solvency margin capital

Capital ratio regulations: Regulations stipulating capital requirements for financial institutions. The regulations define the method of calculation and the required level of capital coverage in relation to the risk-weighted asset base. This is expressed as the capital adequacy ratio.

Capital base: The capital base consists of core capital and supplementary capital.

Core capital: For insurance companies this refers primarily to paid up equity and retained earnings.

Supplementary capital: This consists mainly of subordinated loan capital.

Subordinated loan capital: Loans taken up by the company which are included in the overall capital base, subject to certain conditions. Such loans are subject to special approval by the authorities and are governed by special regulations concerning the term and repayment of the loan. Subordinated loan capital is unsecured and ranks after the company's other debt.

Capital adequacy ratio: Qualifying capital as a percentage of a risk-weighted asset base.

Solvency margin capital: The capital that may be included to cover the solvency margin requirement. It consists of the capital base, 50% of additional allocations and the amount of the security reserve in excess of 55% of the minimum requirement. The solvency margin capital must exceed the solvency margin requirement.

Solvency margin requirement: An expression of the risk linked to the insurance commitments. The solvency margin requirement is calculated in accordance with specific rules based on the individual groups of insurance contracts and summed up for the company as a whole.
